Windows System Requirements

To use your printer in either a stand-alone or peer-to-peer network environment, your system should meet these requirements:

- IBM®-compatible PC with a Pentium® 4, 3 GHz or higher processor recommended
- Microsoft® Windows® 7, Windows Vista®, Windows XP Professional x64 Edition, or Windows XP
- At least 2GB of RAM (4GB or more recommended)
- At least 32GB of free hard disk space for software and processing files
- Quad-speed (4×) CD-ROM or DVD drive for installing the printer software
- For USB connection: a Windows-compliant USB Hi-Speed 2.0 port and a shielded USB “AB” cable from Series A (computer) to Series B (printer), up to 10 feet (3 m) long
- For Ethernet connection: Ethernet equipped PC and a Category 5 compatible cable

Macintosh System Requirements

To use your printer in either a stand-alone or peer-to-peer network environment, your Macintosh® system should meet these requirements:

- Mac OS® X 10.4.11 or higher
- PowerPC® G5, Intel®, or higher processor
- At least 2GB of RAM (4GB or more recommended)
- At least 32GB of free hard disk space for software and processing files
- Quad-speed (4×) or faster CD-ROM or DVD drive for installing the printer software
- For USB connection: a compliant USB Hi-Speed 2.0 port and a shielded USB “AB” cable from Series A (computer) to Series B (printer), up to 10 feet (3 m) long
- For network connection: Ethernet-equipped Macintosh and a Category 5 compatible cable

Caution: Using an improperly shielded cable—especially a cable more than 10 feet (3 m) long—may cause the printer to malfunction.

Note: USB 2.0 is required to run the printer at full speed.
Important Safety Instructions

Before using your printer, read the following safety instructions to make sure you use the equipment safely and effectively.

- The Epson Stylus Pro 7700 weighs about 186 lb (84.5 kg) and the Epson Stylus Pro 9700 weighs about 256 lb (116 kg) without the stand, paper basket, ink, or paper. Make sure you have four people lift the printer. (See page 25.)

- When setting up the printer, make sure you have enough space around it. You may need more space behind the printer if you print on large sheets of heavy stock or posterboard. (See page 21.)

- Place the printer on a flat, stable surface. The printer will not operate properly if it is tilted or at an angle.

- Avoid places subject to rapid changes in temperature and humidity. Also keep the printer away from direct sunlight, strong light, or heat sources.

- Avoid places subject to shocks and vibrations.

- Keep the printer away from dusty areas.

- Keep your entire computer system away from potential sources of electromagnetic interference, such as loudspeakers or the base units of cordless telephones.

- Place the printer near a wall outlet where the plug can be easily unplugged.

- Use only the type of power source indicated on the label.

- Connect the printer to a properly grounded outlet. Avoid using an outlet on the same circuit as a photocopier or air control system that regularly switches on and off.

- Avoid using electrical outlets controlled by wall switches or timers.

- Use only the power cord that comes with the printer. Use of another cord may result in fire or electric shock.

- The printer’s power cord is designed for use with the printer only. Using it with other equipment may result in fire or electric shock.

- Do not use a damaged or frayed power cord.
If you use an extension cord with the printer, make sure the total ampere rating of devices plugged into the extension cord does not exceed the cord’s ampere rating. Also, make sure the total ampere rating of all devices plugged into the wall outlet does not exceed the wall outlet’s ampere rating.

- Do not block or cover the openings in the printer’s case.
- Do not put your hand inside the printer during printing.
- Do not move the print head by hand unless instructed to do so by a service technician; otherwise you may damage the printer.
- Do not insert objects through the slots. Take care not to spill liquid on the printer.
- Do not attempt to service the printer yourself.
- Power down the printer from the control panel, unplug the printer, and refer servicing to qualified service personnel under the following conditions:

  The power cord or plug is damaged; liquid has entered the printer; the printer has been dropped or the cabinet damaged; the printer does not operate normally or exhibits a distinct change in performance.

- Before transporting the printer, make sure the print head is in the far right (home) position.

For California customers only:
The lithium batteries in this product contain Perchlorate Material - special handling may apply, See www.dtsc.ca.gov/hazardouswaste/perchlorate.
Ink Cartridge Safety Instructions

- Keep ink cartridges out of the reach of children and do not drink the ink.
- Store ink cartridges in a cool, dark place.
- If ink gets on your skin, wash it off with soap and water. If ink gets in your eyes, flush them immediately with water.
- Shake ink cartridges before installing them for best results.
- Do not use an ink cartridge beyond the date printed on the cartridge carton.
- Use up the ink cartridge within six months of installation for best results.
- Do not dismantle ink cartridges or try to refill them. This could damage the print head.
- After bringing an ink cartridge inside from a cold storage site, allow it to warm up at room temperature for at least three hours before using it.
- The IC chip on the ink cartridge retains a variety of cartridge information, which allows you to remove and reinsert it freely. However, each time the cartridge is inserted, some ink is consumed because the printer automatically performs a reliability check.
- If you remove an ink cartridge for later use, protect the ink supply area from dirt and dust, and store it in the same environment as this product. Note that there is a valve in the ink supply port, making covers or plugs unnecessary, but care is needed to prevent ink from staining items that the cartridge touches.
- Do not touch the ink supply port, its surrounding area, or the green IC chip on the side of the ink cartridge. Doing so may affect normal operation and printing.

**Caution:** Do not use an outlet that is controlled by an automatic timer or wall switch. Otherwise, you may accidentally shut off the printer and cause damage.
Installing Ink

Use the ink cartridges that came with your printer for initial ink charging. During the initial installation process, it is normal for most of the ink in each cartridge to be used.

The cartridges shipped with your printer are provided mainly to charge the ink system. Make sure you order a new set of cartridges as soon as possible.

1. Press the power button to turn on the printer. In a moment, **INSTALL INK CARTRIDGE** appears on the LCD display and the ink cover pops open slightly.

2. Open the ink cover.

**Note:** The ink cover may take a minute or two to pop open. Wait for the ink cover to open; do not try to pry it.
3. Remove the ink cartridges from their packages, then gently shake each cartridge for about 5 seconds.

4. Note the location of the slots corresponding to each cartridge.

After ink charging is completed, you need to load paper before READY will appear on the display. See page 57 for instructions.

Connecting to Your System

You can use USB and/or Ethernet network connections.

For USB connection, make sure your system has the appropriate port and you have a standard, shielded cable 10 feet (3 m) long or less.

To connect to a network hub, you need a standard RJ-45 CAT-5 network cable. To connect directly to your computer’s network interface, you need an RJ-45 CAT-5 crossover cable.

1. Make sure that both the printer and the computer are turned off.
2. Plug the interface cable into the appropriate port on the printer.

3. Plug the other end of the cable into the appropriate connector on your computer, or network switch or hub.

**Note:** You can check for a newer version of your printer driver on the Epson support site at www.epson.com/support.
5. Click the **Install** button.

Note: If you see a message that the installer has detected an older version of EpsonNet Config on your system, you must uninstall the older version before you can install the new one. Open the **Applications** folder and drag the **EpsonNet** folder into the trash. Then reinstall your printer software.

6. Read the license agreement and click **Accept**.

7. Follow the instructions to install all necessary software and manuals, register your printer, and place a link to the Epson Professional Imaging website on your desktop.

8. When you’re done, click **Exit** and eject the CD. Restart your computer if prompted.

9. After your Macintosh restarts, do one of the following:
For Mac OS X 10.6 and 10.5, select Print & Fax from System Preferences. Click the + button, then select your printer and click Add.

For Mac OS X 10.4, open the Printer Setup Utility. Click Add. You see your printer in the Printer Browser:

**Tip:** If you want to rename the printer for easier identification, enter a new name for it in the Name field on this screen.

For USB connection, select your printer and wait while your Macintosh finds the driver and the Add button becomes available. Then click Add.

For network connection, click More Printers and select a connection, such as EPSON TCP/IP. Select your printer from the list and click Add.
You see your printer in the Printer List.

10. Go to page 55 to update your printer firmware, if necessary.
Updating Your Printer Firmware

To keep your printer features and functionality up to date, you should check for a newer version of firmware on the Epson support site and update your printer, if necessary.

Checking the Current Firmware Version

1. Press the ▶ Menu button.
2. Press the ▼ button until PRINTER STATUS is highlighted, then press Menu.
3. Press Menu again and note the firmware version displayed. When done, press the ◀ button.

Downloading and Updating the Firmware

1. Click the EPSON LFP Remote Panel 2 icon on your desktop. You see the LFP Remote Panel.
2. Select your printer, then click the Firmware Updater button.

When you see the prompt, click OK to have the EPSON LFP Remote Panel utility automatically locate and download the latest firmware from the Epson website.

If you need to download the firmware manually, visit Epson’s U.S. support website (www.epson.com/support) or Canadian support website (www.epson.ca/support), select your product, then click Drivers & Downloads.

Choose the firmware update version for Windows or Macintosh and follow the instructions on the screen.

3. Make sure your printer is turned on, its LCD displays READY, and it is connected to your computer or network, then choose your printer.
4. Click Browse and find the firmware file that you just downloaded and extracted. Select the file and click Choose or Open.
5. If the firmware version of the file is newer, click Update to start the firmware updating process. (If it is the same, you don’t need to update.)
6. When the update is complete, close the Firmware Updater window and Epson LFP Remote window.

If you connected your printer to a network, follow the instructions in the next section to configure the printer for your network.

**Configuring the Printer’s Network Adapter**

Once the printer is connected to your network, follow these steps to configure it:

1. Turn on the printer.

2. Start EpsonNet Config. The EpsonNet Config program searches for all Epson printers on the network and displays the MAC address and IP address for each printer that it finds.

3. Highlight the printer that you want to configure and click **Configuration** to access the TCP/IP selection screen.

4. If necessary, contact your network administrator for instructions on assigning an appropriate IP address.

For more information on configuring the printer, see the on-screen *Network Guide*.

**Note:** After you install the software, you need to load paper and print a test image. If the print quality is satisfactory, your setup is done. If not, you may need to align the print head, as described on page 156.
Chapter 2: Handling Paper and Other Media

The Epson Stylus Pro 7700 and Pro 9700 print on a variety of media, including roll paper and cut sheets in widths up to 24 inches (610 mm) for the Pro 7700 or 44 inches (1118 mm) for the Pro 9700. You can also use heavy stock, such as posterboard up to 59 mil (1.5 mm) thick.

This chapter includes the following information:

- Selecting media for your printer
- Using roll paper
- Using cut sheet paper
- Using the paper basket
- Optimizing the settings for your paper

Handling Paper and Other Media

Always test samples of paper stock in the printer before purchasing large quantities or printing large jobs. If you use non-Epson paper or other media, you may need to adjust various settings and create special paper configurations. See page 82 for instructions.

Available Epson Special Media

One of the key elements for achieving professional quality prints is selecting paper that is specifically optimized for your printer. Epson offers a complete lineup of professional media for a variety of applications. Most Epson professional media are available in sizes from small cut sheets to wide-format rolls. Check the Epson Professional Imaging website at www.proimaging.epson.com or your Epson Professional Imaging Authorized Reseller for available media.

For more details about compatible papers, see page 196.

Guidelines for Using Epson Media

Follow these guidelines, as well as those included in your paper package, when printing on Epson paper and other media:

- Avoid touching the printable surface with your bare hands. Fingerprints may affect print quality. Handle media by the edges or use cotton gloves.
- Be careful not to bend or scratch the paper.
- Always choose the correct Media Type setting in your printer driver software before you send your job. See page 88 (Windows), or page 130 (Mac OS X) for instructions.
- Always select the correct paper source (roll or sheet) in both the printer driver software and on the printer’s control panel. See page 93 or page 126 (Windows), or page 96 (Mac OS X) for instructions on selecting the paper source in your printer software.
- Keep unused media in its original packaging and store it in a cool, dry place to maintain quality. Avoid storing your printouts where they will be exposed to high temperature, humidity, or direct sunlight.
- Store sheet media on a flat surface.
Using Roll Paper

You can use roll paper with a 2- or 3-inch core and a width of up to 24 inches (61 cm) for the Pro 7700, or 44 inches (112 cm) for the Pro 9700. Manually switching rolls is a simple process.

Roll Paper Guidelines

When printing on roll paper, be sure to follow the media handling guidelines on page 58, as well as these special guidelines for roll paper:

- When storing roll paper, keep it in its original packaging—including the bag, end caps, and box.
- To avoid feeding excess paper, make sure the Sheet icon does not appear on the LCD display. Press the Paper Source button until the or roll icon appears.
- Choose if you want the paper to be cut automatically after each page is printed.
- Choose if you want to print a series of pages and keep them together for cutting later on or use the Auto Take-up Reel (Pro 9700 only).
- If you’re loading heavy paper, you may need to increase the paper suction by pressing the Paper Feed button. For lightweight paper, decrease the suction by pressing the Paper Feed button.
- Do not leave roll paper loaded in the printer when it is not in use.

Selecting the Paper Type

Whenever you load a new type of paper, you need to select the paper type on the printer’s control panel.

1. Press Menu.
2. Press or to select PAPER SETUP, then press.
3. Select PAPER TYPE, then press.
4. Select the paper that you are using as listed on page 60, then press the OK button to save the setting.
5. Press to exit the menu.
If your paper does not appear on the control panel, check the instructions included with the paper, or look on the Epson website (www.proimaging.epson.com). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

* Other Media Type settings in the list can be used to experiment with other paper types.
Setting Up Automatic Media Tracking and Identification

Before you load roll paper in the printer, you can set up the automatic media tracking system. This system prints a barcode on the edge of the paper that indicates the media type, roll length, and the alert setting.

When the printer is turned on or roll paper is placed in the printer, the barcode is scanned and the amount of roll paper remaining is displayed on the LCD panel. You will see an alert message when the roll is nearly used up.

The barcode is printed when you press the Paper release (ePlaten) button.

Make sure PAPER OUT appears on the control panel. Then follow these steps to set up the automatic media tracking system:

1. Press ▶ Menu.
2. Press ▲ or ▼ to select PAPER SETUP, then press ▶.
3. Press ▶ to select ROLL PAPER REMAINING.
4. Press ▶ to select REMAINING PPR SETUP.
5. Press ▼, select ON, and press OK.
6. Press ◄ to go back to REMAINING PPR SETUP.
7. Press ▼ to select ROLL PAPER LENGTH.
8. Press ▶, then select the length of the roll paper loaded in the printer, from 15 to 300 ft (5 to 99.5 m), then press OK.
9. Press ◄, then press ▼ to select ROLL LENGTH ALERT.
10. Press ▶, then select the length at which you want to receive an alert message, from 3 to 50 ft (1 to 15 m), then press OK.
11. Press II - to exit the menu.

Tip: You can use Maintenance mode to switch the units of measurement in the printer from meters to feet. See page 162 for instructions.
Placing the Paper in the Printer

1. Open the roll paper cover.

2. Push the lock lever down firmly, then move the roll paper holder to the left.
3. Place the roll on top of the printer.

4. If necessary, adjust the roll media adapters to fit the core size of the roll paper.
   2-inch core:

   3-inch core:
5. Release the tension lever on both adapters.

6. Push the adapters into the paper core at both ends of the roll. Then pull down the tension levers.
7. Move the roll paper to the right side until it touches the roll paper guide.

8. Slide the roll paper holder to align the left adapter with the ▲ on the holder.
9. Roll the paper slowly into position.

10. Slide the roll paper holder to the right to secure it in the printer. Make sure both ends of the roll paper are secured in the adapters.
11. Pull up the lock lever to lock the paper in place.

12. If the Paper release light is not on, press the Paper release button.

**Loading the Paper for Printing**

1. Insert the paper into the slot and pull it down.
If the paper doesn’t come out, you may need to lower the suction by pressing the ▼ Paper Feed button. Make sure you return the suction to normal after the paper is loaded.

2. Close the roll paper cover.

3. Press the ◼ Paper release button.

4. Press the ➡ button to move the paper into printing position or wait for the paper to move into position automatically.

5. If you see a question on the display about paper settings, select Yes if the settings are correct, or select No, then change the settings.

6. Press OK.

7. If the edge of the paper is uneven or folded, press the ⌂ Paper cut button to cut the edge.

To avoid indenting or creasing the paper, remove it from the paper path and roll it up when you are not printing.

Note: Opening the front cover causes printing to stop. Do not open the front cover while printing is in progress, or your print quality might be affected.
Cutting Paper Manually with the Built-in Cutter

When you’re not using the Auto Cut On setting, you can cut roll paper manually by pressing a button after your print job is finished. You can use the ▼ Paper cut button to cut most types of paper.

1. Before you print, press the ▲ Paper Source button until you see the □ roll (Auto Cut Off) icon on the LCD display.

2. Run your print job.

3. Press and release the ▼ Paper cut button. When the selection menu appears, select CUT, then press OK. The paper is cut.

4. If the paper cannot be cut by the built-in cutter, press the ▼ button to feed the paper to the manual cutting position. Then cut it manually.

Printing Trim Lines

You can print trim lines on the right edge of your pages (Auto Cut On) or on the right and bottom edge (Auto Cut Off).

1. Press ▲ Menu.

2. Press ▲ Menu again to select the Printer Setup menu.

3. Press ▼ to select PAGE LINE, then press ▲.

4. Press ▼ or ▲ to select ON.

5. Press OK to save the setting. A check mark appears next to ON.

6. Press ||·■ to exit the menu.

You can also specify trim lines from your printer driver software. For instructions, see page 96 (Windows), or pages 121 or 134 (Mac OS X).
Removing Paper from the Printer

1. Open the roll paper cover.

2. Press the \(\text{Paper release button}\) to release the paper.
   - If automatic media tracking is on, the barcode and paper information is printed.
   - If you are not using the Auto Take-Up Reel, the paper is rewound automatically.
• If you are using the Auto Take-Up Reel, you need to rewind the paper manually.

3. Push down the lock lever firmly to release it. Then move the roll paper holder all the way to the left and remove it from the roll.
4. Roll the paper forward so that it rests on top of the printer.

5. Pull up the tension levers, then remove the adapters from the paper roll.

6. Rewind the paper carefully and place it in its original package.

Using Cut Sheet Paper

You can print on many types of cut sheet paper and other media. The printer accepts sheets in widths from letter size/A4 to 24 inches (61 cm) for the Pro 7700 or 44 inches (112 cm) for the Pro 9700.

You can leave your roll paper in the printer when you print on cut sheets; make sure it is removed from the paper path and rolled up.

How you load the paper depends on its thickness:

- For most paper, see the section below.
- For stock thicker than 19 mil (0.5 mm), see page 75.

Loading Cut Sheets

Make sure you load paper in the portrait orientation (short edge first).

You can load paper without pressing the Paper release button. This prevents scratching and is fast and easy.

1. Make sure the printer is turned on and the roll paper cover is closed.
2. Press the Paper Source button until the Sheet icon appears on the LCD display.

Note: For heavy paper, you may need to increase the suction by pressing the button. This helps hold the paper in place during loading and printing.

For lightweight paper, decrease the suction by pressing the button.
3. Feed the sheet into the paper slot until it meets resistance. Make sure the right edge of the paper is straight and aligned with the vertical line on the roll paper cover.

4. Press ▼. The sheet feeds into printing position automatically.

5. If you see a question on the display about paper settings, select **Yes** if the settings are correct, or select **No**, then change the settings.

6. Press **OK**.

7. Print your page. After it is finished, the sheet stays in the printer.

8. To remove your print, press the ▼ button while holding the sheet.
Loading Thick Sheets

Make sure you load paper in the portrait orientation (short edge first).

The only exception is paper that is more than 19 mil (0.5 mm) thick and 28.6 inches (728 mm) long, which should be loaded in landscape orientation (Pro 9700 only).

1. Make sure the printer is turned on and the roll paper cover is closed.

2. Press the Paper Source button until the Sheet icon appears on the LCD display.

3. Press the Paper release button.

4. Feed the sheet into the paper slot. Make sure the right and top edges of the paper are straight and aligned with the horizontal and vertical lines on the printer.

Note: You may need to increase the suction by pressing the button. This helps hold the paper in place during loading and printing.
5. Press the Paper release button.

6. Press the button to move the paper into printing position or wait for the paper to move into position automatically.

7. If you see a question on the display about paper settings, select Yes if the settings are correct, or select No, then change the settings.

8. Press OK.

9. Print your page. After it is finished, the sheet stays in the printer.

10. To remove your print, press the button while holding the sheet.

Note: If you notice head strikes on your prints, make sure your paper is flat. You can also try changing the PLATEN GAP setting to WIDE. If that doesn’t solve the problem, try changing it to WIDER.

Caution: To avoid damaging the printer, make sure you do not select the NARROW setting when you print on thick media.

**Adjusting the Platen Gap for Thick or Thin Paper**

When you print on unusually thick or thin paper, you may need to adjust the platen gap setting. STANDARD is the default setting. However, if print quality is not satisfactory when using very thin or very thick stock, you may need to change this setting.

1. Press Menu.

2. Press again to select the Printer Setup menu and highlight PLATEN GAP.

3. Press. STANDARD is selected as the current setting.

4. Use the ▲ or ▼ button to choose NARROW, WIDE, WIDER, or WIDEST.

5. Press OK to save the setting. A check mark appears next to the selected setting.

6. Press to exit the menu.
If you’ve selected a non-standard platen gap, the following symbols appear in the corner of the display to remind you of the narrow or wide setting:

- Widest
- Wider
- Wide
- Narrow

When you switch media, don’t forget to change the setting back to STANDARD.

If you’re printing on non-Epson media and not using the Epson driver, you may also need to create a paper configuration to optimize your results. See page 82 for more information.

**Using the Paper Basket**

The paper basket attaches to your printer and catches your printouts as they come out. The basket keeps your printouts from getting dirty or scratched. You can set it up either to catch the paper under the printer or in front of the printer.

**Catching Printouts in Front of the Printer**

Follow the steps below to set up the basket in front of the printer. Use this method for paper more than 19 mil (0.5 mm) thick or any prints that are 62 inches (157 cm) or longer (for the Pro 9700) or 36 inches (91 cm) or longer (for the Pro 7700).

1. If you are using the paper guides, make sure they are in front of the basket, as shown below.
2. For the Pro 9700, raise the back of the basket all the way up.

3. Open the tabs at the front of the basket and tilt it down. Then raise the paper guides.

4. Raise the front of the basket so that the surface is taut. Then lower the paper guides so that your prints slide smoothly onto the cloth.
Catching Printouts Under the Printer

Follow these steps to catch printouts under the printer:

1. Raise the paper guides and tilt the front of the basket down.

2. Lower the paper guides, then raise the front of the basket all the way up. Fasten the front of the basket with the tabs.

Note: To avoid paper feed errors, do not allow prints to stack up in the paper basket.
3. For the Pro 9700, adjust the basket based on your print size.

- $23.4 \times 33.1$ inches (A1) or smaller

**Note:** If printouts on matte paper have banding, pull the paper guides forward.

- Larger than $23.4 \times 33.1$ inches (A1)
Storing the Paper Basket

If you are not using the paper basket, you can fold it out of the way.

1. For the Pro 9700, raise the back of the basket.

2. Raise the paper guides, then adjust the tabs and raise the front of the basket. Lower the paper guides.
**Optimizing the Settings for Your Paper**

When you choose a media type in your Epson printer software, the driver automatically determines the best settings for your paper. However, you may want to fine-tune how the printer handles various media—especially if you use non-Epson paper or a paper not supported by the driver. Use the paper configuration settings described below.

You can create a special configuration, or group of settings, for each paper type (up to ten types) and select the desired configuration whenever you print on a particular stock.

**Creating Paper Configurations**

To create a configuration for a specific paper type, make sure the paper you want to configure is loaded in the printer. Then follow these steps:

1. Press ▶ Menu, then press ▲ or ▼ to select PAPER SETUP.
2. Press ▶, then press ▼ to select CUSTOM PAPER.
3. Press ▶, then press ▼ or ▲ to select a paper configuration number (1 to 10). Press ▶ to save the number setting.
4. Press ▼ or ▲ to select PAPER TYPE, then press ▶. Press ▼ or ▲ to select a media type, then press ▶. Press OK to save it.
5. Press ◀ twice to go back to the previous menu.
6. Press ▼ or ▲ to select PLATEN GAP, then press ▶. Press the ▼ button to select NARROW, STANDARD, WIDE, or WIDER. The STANDARD setting is recommended for most paper types. Press OK to save the setting, then press ◀ to go back to the previous menu.
7. Press ▼ or ▲ to select THICKNESS PATTERN, then press ▶. Press OK to print the paper thickness pattern. A pattern similar to the following is printed:

```
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15
```

**Note:** Paper configurations are needed only for non-Epson media.

**Note:** You can also create paper configurations using the Epson LFP Remote Panel installed from the printer software CD.
8. Examine the printed pattern for the most evenly overlapping lines. Choose the number with the most even lines. In the example shown above, the lines under number 4 are the most even.

After printing the pattern, THICKNESS NUMBER is highlighted.

9. Press ▲ or ▼ to select the number that you noted in step 8, then press OK.

10. Press ◀, then ▼ to select any of the menu options shown below. Make adjustments as needed, and press OK to save each setting. Then press ◀ to return to the menu.

You can also make similar settings using the printer driver software. For instructions, see page 100 (Windows) or page 132 (Mac OS X).

- PAPER FEED ADJUST helps eliminate banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.

- DRYING TIME lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 10 seconds after each pass to allow ink to dry on the page.

- PAPER SUCTION lets you decrease the paper suction level when printing on thin media (under 12 lb), such as drafting paper or backlight film.

- SET ROLL PAPER TENSION lets you adjust the tension to HIGH or HIGHER for cloth or thin paper, or if the paper wrinkles during printing.

- REMOVE SKEW helps reduce paper skew for very thin media or film.

After you create paper configurations, you can use the TEST PRINT menu to print out a list of paper numbers showing the settings for each one.
Printing Your Paper Configurations

You can print a list showing the settings for all your paper configurations. This makes it easy to select the configuration you want for a particular type of paper.

1. Press ▶ Menu, then press ▼ to highlight TEST PRINT. Press ▶ again.
2. Press ▼ to select CUSTOM PAPER, then press ▶.
3. Press OK to print your custom paper configurations.

Selecting Paper Configurations

Once you have created a paper configuration, you can select it whenever you print on that paper:

1. Press ▶ Menu, then press ▲ or ▼ to select PAPER SETUP.
2. Press ▶, then press ▼ to select PAPER TYPE, then press ▶.
3. Press ▼ to select CUSTOM PAPER, then press ▶.
4. Press ▲ or ▼ to select the configuration you want to use.
5. Press OK. The configuration number you selected is displayed on the LCD with a check mark.
6. Press | · | to exit the menu. The configuration you selected is displayed on the LCD.
Chapter 3: Printing With Epson Drivers for Windows

Your Epson Stylus Pro 7700 or Pro 9700 comes with drivers and utilities that let you print and manage print jobs.

ICC profiles are included, so you can use the color management features in Adobe Photoshop or other applications, or in the driver itself. A color-managed workflow using Photoshop and a color-calibrated monitor will give you the most accurate colors and best output from your printer for color photos. See page 141 for instructions.

You can create your own profiles if you have the required hardware and software, or you can have them created by a color specialist. Make sure any profiles you want to use are located in the standard folder for your operating system. When you install the Epson printer driver, the ready-made profiles are automatically copied to the right folder.

Before you print, you need to set basic printing properties. Make sure you have installed the Epson driver and utilities from the CD-ROM. See page 49 for instructions.

If you plan on printing borderless images on roll paper, check the guidelines on page 86 to size your image correctly.

This chapter includes the following information:

- Sizing images for borderless printing on roll paper
- Choosing basic print options
- Choosing color management options
- Choosing roll paper settings
- Choosing cut sheet paper settings
- Choosing page layout options
- Choosing advanced black and white photo settings
- Choosing paper configuration options
- Saving, exporting, and importing groups of settings
- Managing print jobs

Tip: Check the Epson Pro Imaging website at www.proimaging.epson.com for updated drivers and utilities that may become available.
Sizing Images for Borderless Printing on Roll Paper

For true borderless printing on roll paper, you can select either Auto Expand or Retain Size or create a custom paper size, as described on page 93. Your image may be clipped on the left and right edges, but you can minimize clipping by sizing your image according to the roll paper width and by adjusting the length by adding 0.1 inch (2.54 mm) to it.

Auto Expand provides the best solution for borderless printing with minimal image clipping because you can create an image width almost equal to the width of the roll media. If you use Retain Size, you need to size your image slightly wider than the paper width. See the table below for guidelines:

<table>

Choosing Basic Print Options

The driver offers automatic settings that optimize print quality and speed when you’re using Epson media. You can also choose custom settings for more control over your printer and color management options.

Follow these steps to make basic settings:

1. Start an application, open the file you want to print, and select **Print** in your application. You see the Print window.

2. Make sure your printer is selected, then click the **Properties** or **Preferences** button. (If you see a **Setup**, **Printer**, or **Options** button, click it instead. Then click **Properties** or **Preferences**.)

You see a window like the following:

![Print window example](image)

*Note:* If you need more information about print options, you can click the **Help** button on any screen.

This box shows you the current settings, but you can’t change them from here.
3. Select a **Media Type** setting that corresponds to the paper you are printing on. See the table on page 89 for more information.
   - If you are using a color-managed workflow, make sure you choose media type and resolution settings that match the ICC profile you are using.
   - If you have saved custom media type configurations or set up custom paper configurations, you can select them by clicking the **Custom Settings** button. See page 100 for more information about custom paper configurations.
   - If the media type has been set on the printer’s control panel, select **Auto Acquire**.

**Note:** If a color setting is grayed out, it is not supported for the selected Media Type.

**Note:** The Print Quality settings depend on the Media Type you selected. Choose lower print quality for faster printing, or **SuperFine - 1440 dpi** for best quality.

4. For the **Color** setting, select one of the following:
   - **Color** for any type of photographic printing.
   - **Black** only if you’re printing line drawings or other non-photographic images.

5. For the **Print Quality** setting, choose **Quality** or **Max Quality**. Or choose **Quality Options** to display a window like the following:
Use the Speed/Quality slider to set the desired quality level. Select from the following additional options and click OK:

- **High Speed** for fast, bidirectional printing at lower quality.
- **Edge Smoothing** to improve the quality of low-resolution images.
- **Finest Detail** for sharper edges on vector-based data including text, graphics, and line art. (This setting does not affect photographs and is not recommended for large files.)

6. Set the **Mode** option as follows:

- Click **Automatic** to have the printer driver analyze the contents of your image or file and make the appropriate printing adjustments.

You can choose one of these settings in the drop-down menu:

- **Charts and Graphs** intensifies colors and lightens the midtones and highlights of an image. Use this setting for presentation graphics.
- **EPSON Standard (sRGB)** increases the contrast in images. Use this setting for color photographs.

- Click **Custom**, then follow the instructions on page 91 to select color management options.

**Selecting the Correct Media Type Setting**

The table on the next page lists the settings designed to produce the best results on Epson media.

If your paper is not listed, check the instructions included with the paper, or look on the Epson website www.proimaging.epson.com (U.S. sales), www.epson.ca (Canadian sales). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

Choosing Color Management Options

The printer driver offers several methods for managing the color in your prints, including turning the driver’s color management settings off.

If you are using color management settings in Photoshop or another application, it is very important to access the advanced settings and turn off color management in the printer driver, as described here. (For instructions on using Photoshop to manage color, see page 141.)

1. In the Properties or Preferences window, make sure the Main tab is selected.

2. For the Mode setting, select Custom.
3. Choose one of the following settings (if you select Color Controls or ICM, click the Advanced button after you select the setting):

- **Off (No Color Adjustment)** disables color management in the printer driver. Choose this mode when you use a color managed workflow in Photoshop or other software. See page 141 for instructions.

- **Color Controls** lets you specify individual values for adjusting brightness, contrast, saturation, and CMY inks, or choose from three Printer Color Adjustment modes. You can also choose from two Gamma settings, and use either a color circle or slide bar to adjust color.

Tip: If you turn off color management, you can still control the ink density, as described on page 100.
ICM adjusts colors based on the printer’s ICC profile, using the Image Color Matching system. You can choose the input profile and other settings as shown below.

In most cases, you will get better results by applying color management in your application, rather than in the printer driver. See page 141 for instructions.

4. Click OK to save your settings.

Choosing Roll Paper Options

Follow the steps in this section to print on roll paper and select settings for borderless printing and automatic cutting. (If you’re printing on cut sheets, see page 96).

1. On the Properties or Preferences window, make sure the Main tab is selected.

2. For the Source setting, select Roll Paper or Roll Paper (Banner).

The Roll Paper (Banner) setting allows you to print a series of continuous images without any space between them. This option is not available with all applications, and is mostly for tiling an image.
**Save Roll Paper** saves paper by not feeding the blank portion of the last page of your document. Available only if you’ve selected **Roll Paper (Banner)** as the Source setting.

3. For the **Size** setting, select the size of your image or output paper.
   
   To make the best use of your roll paper, creating a custom paper size is recommended. Select **User Defined**. You see this window:

   ![User Defined Paper Size Window](image)

   Type a name for your custom size, then enter the size in hundredths of an inch (or centimeters) and click **Save**. Then click **OK**.

4. If you want to reduce or enlarge your image, click the **Page Layout** tab. See page 99 for more information.

5. If you want to print without margins, click **Borderless**. If you’re not printing borderless images, go to step 7.

   Note that borderless printing takes longer than normal printing. See page 86 for more information about borderless printing on roll paper.
6. Click the **Expansion** button to select a borderless sizing option. Choose **Auto Expand** or **Retain Size**, then click **OK**.

![Expansion dialog box]

**Auto Expand** enlarges your image (up to 3%) to fit the size of the paper. You can use the slider to adjust the expansion.

**Retain Size** prints your image at the size you specify in your application. You need to size it slightly wider than the paper width if you want to print without borders. See page 86 for more information.

The widths shown in the table on page 86 work with the **Standard** Expansion setting.

- Use the **Min** setting to minimize the amount of image clipping. You may see a white border around your image.
- Use the **Max** setting to maximize the image width. This will increase the amount of image clipping.

7. Click the **Roll Paper Option** button. You see this window:

![Roll Paper Option dialog box]
8. Choose one of the following Auto Cut settings:
   - **Normal Cut** allows margin space at the top and bottom of each image.
   - **Double Cut** extends the space between images and trims each print individually. This provides the cleanest edge for borderless printing.
   - **Single Cut** allows images to be printed end-to-end and saves paper. With borderless printing, you may see a sliver of the previous or next image if you print multiple images in one print job. You will see a white margin between print jobs.
   - **Off** disables automatic cutting. Choose this setting if you want to operate the cutter manually, use the optional Auto Take-Up Reel, or print multiple print jobs without cutting. See page 69 for instructions on operating the cutter manually.

9. Select these additional roll paper options, if necessary:
   - **Auto Rotate** saves paper if your document length is shorter than the printable width of the roll. The document is automatically rotated 90 degrees and printed crosswise. Be sure to click **Roll Width** and select the width of your roll paper.
   - **Print Page Line** prints trim lines on the right and bottom edges of your pages.

10. When you’re finished, click **OK**.

**Choosing Cut Sheet Paper Options**

Follow the steps in this section to print on cut sheet paper and select settings for borderless printing, if desired. (If you're printing on roll paper, see page 93.)

1. On the Properties or Preferences window, make sure the **Main** tab is selected.
2. For the **Source** setting, select **Sheet**.

![Image 1](image1)

3. For the **Size** setting, select the size of the sheet loaded in the printer.

If the size of your paper is not listed, you can create a custom paper size. Select **User Defined**. You see this window:

![Image 2](image2)
Type a name for your custom size, then enter the size in hundredths of an inch (or centimeters) and click Save. Then click OK.

4. If you want to center your image on the sheet, click Printable Area, then select Centered.

5. If you want to print to the edges of the page, click Borderless (not available for custom paper sizes). If you’re not printing borderless images, go to step 7.

   Note that borderless printing applies only to the left and right sides of the page on cut sheets; margins are required at the top and bottom of the page. For full-bleed borderless printing, use roll paper (see page 93 for instructions).

6. Click the Expansion button and choose Auto Expand or Retain Size:
   - Auto Expand enlarges your image (up to 3%) to fit the size of the paper. You can use the slider to control the amount of expansion.
   - Retain Size prints your image at the size you specify in your application. You need to size it slightly wider than the paper width if you want to print without borders.

7. If you want to reduce or enlarge your image, click the Page Layout tab. See the next section for more information.
Choosing Page Layout Options

You can print a poster-size image, even if your application does not support poster printing. Follow these steps to reduce or enlarge your image:

1. On the Properties or Preferences window, click the Page Layout tab. You see this window:

2. Select the settings you want for Orientation and Copies.

3. Click Reduce/Enlarge if you want to have the driver resize your image.

   You can select Fit to Page or Fit to Roll Paper Width, or select Custom and enter a scaling percentage.

4. If you are enlarging your image beyond the limits of your application program, make sure Optimize Enlargement is selected. The driver will increase the image size up to 650% and decrease the output resolution to stay within the pixel limitations. Depending on the resolution of your image and the print size, you may see reduced quality in the print.

Note: Select Landscape when you want to rotate your image 90°.
5. Click Print Bckg Color if you want to print color on the background of the page. Click the Color Settings button to select the color you want.

6. Click Job Settings if you want to have the time, date, and other information about your print job printed at the top or bottom of the page. Click Details, select the settings you want to use, and click OK.

Choosing Paper Configuration Options

If you are using non-Epson media and you need to fine-tune its performance, you can create a custom paper configuration and save it as a Media Type setting in the printer driver. Then, whenever you print on that media, you can select the custom Media Type, select the rest of your print settings, and print. You can even export the settings to a file you can share.

1. Click the Paper Config button on the Main tab. You see this window:

![Paper Configuration Window](image)

2. Select the correct settings to match your ICC profile. These settings override any paper configuration settings you may have made using the printer’s control panel.
   - **Color Density** lets you control the ink saturation level (for example, when you turn off color management in your printer software).

Note: You may need to change the Color Density setting if your custom profile was created to optimize D-max and color gamut.
• **Drying Time per Print Head Pass** lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 5 seconds after each pass to allow ink to dry on the page.

• **Drying Time per Page** lets you print with non-Epson media and avoid smearing the ink.

• **Paper Feed Adjustment** helps reduce banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.

• **Paper Suction** lets you decrease the paper suction level when printing on thinner papers (less than 12 lb), such as CAD drafting paper.

• **Paper Thickness** helps reduce vertical banding and creates a sharper image when printing on unusually thick or thin paper.

• **Platen Gap** lets you fine-tune the setting for various paper thicknesses.

• **Roll Paper Back Tension** lets you adjust the tension when printing on roll paper. Change the value if you find wrinkles on your printouts when **Auto** is selected.

3. When you finish selecting Paper Configuration settings, click **OK**.
4. On the **Main** tab, select any other necessary setting for your paper in the Media Settings box. (See page 87 through page 93 for details.)
5. Click the **Custom Settings** button. You see a window like this:

![Custom Settings Window](image)

6. Verify that your settings are correct, type a name for the custom media type, and click **Save**.

7. After saving your settings, you can do the following:
   - To use the settings to print right away, select the name you gave them in the **Media Type** list. Select the rest of the necessary print settings and print.
   - To save the settings to a file that you can share, click the **Custom Settings** button again, click the name of the settings in the list, click **Export**, select a location, enter a file name, and click **Save**.
   - To import settings from a file shared with you that does not exist in your Media Type list, click the **Custom Settings** button again, click **Import**, select the file you want to import, and click **Open**. When you return to the window shown above, click **Cancel**.
Saving, Exporting, and Importing Custom Settings

You can save groups of settings so you can reuse them for future print jobs with the same profile/printer/ink/media combination. You can also export them as a file that you can share with others, who can import them for printing.

In addition, the printer driver includes pre-defined setting groups for various types of printing. You can select them to set most of the settings you need, and then customize them for your particular print job.

You can also add, delete, or hide items in the printer driver window to customize the driver for your uses.

Saving and Exporting a Custom Settings Group

1. Follow the instructions in this chapter to select all the correct settings for a print job.

2. Click the Save/Del button at the top of the Main or Page Layout screen. You see a window like this:

3. Verify that your settings are correct, type a name for the settings group, and click Save.
4. After saving your settings, you can do the following:
   - To use the setting group to print right away, select the name you gave it in the Select Setting list, if necessary, and print.
   - To save the settings to a file that you can share, click the Save/Del button again, click the name of the setting group in the list, click Export, select a location, enter a file name, and click Save.

**Importing a Custom Settings Group**

1. To import settings from a file shared with you that does not exist in your Select Setting list, click the Save/Del button.
2. Click Import, select the file you want to import, and click Open.
3. When you return to the settings list window, click Cancel.
4. To use the setting group to print right away, select the name you gave it in the Select Setting list, if necessary, and print.

**Loading a Pre-Defined Settings Group**

1. To view the settings associated with the pre-defined setting groups that came with your printer driver, click the Save/Del button. Then click the following category and name, and check the Registered Settings column:
   - Photo > Highest Quality
   - Poster > Chroma Saturation
   - Others > 2Page N-up
2. Click Cancel.
3. To load a pre-defined setting group, select its category name in the Select Setting list (if necessary), customize any of the settings that do not match your print job, and print.
Editing Printer Driver Settings

1. Click the Utility tab, then select Menu Arrangement.

2. Select the item you want to edit. You can do the following:
   - Drag and drop the items to rearrange them
   - Add or delete groups
   - Move unused items into the Not Display group

3. When you’re finished, click Save.
Managing Print Jobs

Your printer comes with two utilities that let you check on your print jobs and cancel, pause, or restart them.

The Progress Meter opens each time you send a print job. Status Monitor 3, which appears on the taskbar when you print, lets you check the printer’s status and monitor print jobs. You can control how these programs work using the Speed and Progress and Monitoring Preferences utilities.

Using the Progress Meter

After you send a print job, the Progress Meter window appears:

You can use the Stop button to cancel your print job. You also see how much ink you have left and view printing tips.

If you don’t want the Progress Meter to appear, you can turn it off. See the next section for instructions.
Optimizing Print Speed

You can use the Speed and Progress utility to improve printing speed.

1. Click the Utility tab, then click the Speed and Progress button. You see this window:

   ![Speed and Progress Window](image)

   Note: If you want to disable display of the progress meter during printing, you can click the Show Progress Meter checkbox to deselect it.

2. Select from the following options:
   - **High Speed Copies** speeds up printing of multiple copies of the same document using hard disk space as a cache. If you have multiple hard drives, you can select a different drive to spool to in the High Speed Copy Folder list to the right.
   - **Show Progress Meter** lets you control whether or not the Progress Meter is displayed when you send a print job.
   - **Disable EPSON Status Monitor 3** disables the printer software utilities. Selecting this option is not recommended unless you experience conflicts with other software.
   - **Show Mouse Over Help** lets you turn off the tool tips that appear when you move your cursor over the screen.
   - **Always spool RAW datatype** lets you spool documents using the RAW format instead of the EMF (metafile) format. Because the RAW format requires fewer resources, printing is faster and you can avoid certain problems, such as insufficient memory or disk space.
- **Page Rendering Mode** speeds printing by rendering the entire page. Use this setting if print speed is extremely slow or the print head stops for a few minutes while printing. Printing will take longer to start.

- **Coarse Rendering** allows you to override the length or width limitations in applications (such as Photoshop) that restrict the number of pixels you can print.

- **Print as Bitmap** allows large or complex vector graphics to print faster in Adobe Acrobat® or any other non-image based application.

- **Allow Applications to Perform ICM Color Matching** allows the halftone output processing to be performed by the printer. This feature speeds up processing, especially for older computers, and ensures that the printer runs at maximum speed. This involves image compression and decompression, and does not affect the quality of your output.

- **Change Standard Resolution** allows you to change the resolution of your output.

3. Click **OK** to save your settings.
Setting Monitoring Preferences

You can choose when and how you want to be notified of problems, whether you want a Status Monitor 3 icon to appear on your Windows taskbar, and whether you want to allow monitoring by other users who share the printer.

1. Click the Utility tab, then click the Monitoring Preferences button. You see this window:

![Monitoring Preferences window]

2. Select the notification options you want to use if various printing events occur.

3. If you want to have the Status Monitor 3 icon appear in your Windows taskbar, click the Shortcut Icon checkbox. Then select the icon to use.

   When the shortcut is enabled, you can simply double-click the icon to open the Status Monitor 3 window or right-click it, then select Monitoring Preferences in the pop-up menu.

4. Select Allow monitoring of shared printers if your printer is shared and you want to let other users monitor it.

5. Click OK to save your settings.
Your Epson Stylus Pro 7700 or Pro 9700 comes with drivers and utilities that let you print and manage print jobs.

ICC profiles for ColorSync® are included, so you can use color management features in Adobe® Photoshop® or other applications, or in the driver itself. A color-managed workflow using Photoshop and a color-calibrated monitor will give you the most accurate colors and best output from your printer for color photos. See page 141 for instructions.

You can create your own profiles if you have the required hardware and software, or you can have them created by a color specialist. Make sure any profiles you want to use are located in the standard folder for your operating system. When you install the Epson printer driver, the ready-made profiles are automatically copied to the right folder.

Before you print, make sure you have installed the Epson printer driver and utilities from the CD-ROM. If you are using Mac OS X 10.4.11, you also need to configure your connection and set up the printer in the Printer Setup Utility. For instructions on installing and configuring the printer driver, see page 51.

If you plan on printing borderless images on roll paper, check the guidelines on page 112 to size your image correctly.

This chapter includes the following information for Mac OS X:

- Choosing page setup settings for cut sheets and roll paper
- Choosing basic print options
- Choosing color management options
- Choosing paper configuration settings
- Choosing roll paper options
- Controlling expansion of borderless images
- Creating a custom preset and printing
- Managing print jobs

Tip: Check the Epson Pro Imaging website at www.proimaging.epson.com for updated drivers and utilities that may become available.
**Sizing Images for Borderless Printing on Roll Paper**

For true borderless printing on roll paper, you can select a Paper Size setting with an **Auto Expand** or **Retain Size** option, or create a custom paper size, as described on page 126. Your image may be clipped on the left and right edges, but you can minimize clipping by sizing your image according to the paper width and by adjusting the length by adding 0.1 inch (2.54 mm) to it.

Paper sizes with the **Auto Expand** option provide the best solution for borderless printing with minimal image clipping. Using this setting, you can create an image width almost equal to the width of the roll media. If you use a paper size with the **Retain Size** option, you should create an image slightly wider than the actual width of the roll media. Or you can create a custom paper size and select the **Retain Size** option. See the table below for guidelines:

Printing With Mac OS X 10.6 and 10.5

If you’re using Mac OS X 10.6 or 10.5, follow the instructions below. If you’re using Mac OS X 10.4, see page 126.

Choosing Page Setup and Basic Print Options

You can choose from several options for printing on cut sheets or roll paper. You can also select the orientation of your image and the paper size. For printing on roll media, creating a custom page size is recommended to make the best use of your paper.

Note the following limitations on borderless printing:

- Borderless printing takes longer than normal printing.
- Margins are required at the top and bottom of the page on cut sheets. Full borderless printing is available on roll paper only.

Once you have selected your page setup options, you need to select printing options. The Epson driver offers automatic settings that optimize print quality and speed when you’re using Epson media. You can also choose additional settings for more control over your printer and color output.

1. Open the file you want to print and select Print in your application.

2. Click the arrow to expand the Print window, if necessary.
3. Choose your printer from the Printer menu.

4. Click the Paper Size drop-down menu.
   - If you’re printing on a cut sheet, choose the size of the paper you are using and one of the options listed below. Then continue with step 6.
   - If you’re using roll paper, Epson recommends that you create a custom paper size to make the best use of your paper. See step 5 for instructions.
Also be sure to select roll paper options, as described on page 121.

The following settings are available, depending on the size you choose:

- **The Sheet size setting** prints on cut sheet paper with a bottom margin larger than the top and sides.

- **Sheet - Borderless (Auto Expand)** prints on cut sheets and enlarges your image (up to 3%) to fit the width of the paper (without side borders).

- **Sheet - Borderless (Retain Size)** prints your image at the size you specify in your application. You need to size it slightly wider than the paper width to print without side borders.

- **Roll Paper - Borderless (Auto Expand)** prints without borders on roll paper and enlarges your image (up to 3%) to fit the size of the paper. This selection is recommended for borderless printing with minimal clipping of your image. See page 112 for more information.
- **Roll Paper - Borderless (Retain Size)** prints your image on roll paper at the size you specify in your application. You need to size it slightly wider than the paper width to print without borders. See page 112 for more information.

- **Roll Paper - Banner** prints a series of continuous images without any margin space between them, but with normal side borders.

- **Roll Paper - Borderless Banner** prints a series of continuous borderless images without space between them.

5. If you are printing on roll paper, choose **Manage Custom Sizes** from the **Paper Size** menu.

   (If you are printing on a cut sheet, skip to step 6.)

   ![Custom Page Sizes](image)

   **Click to create a custom page size**

   Note: If you don’t see the Orientation or Scale settings in the Print window, check for them in your application before printing. For example, you may be able to select them by opening the File menu and selecting Page Setup.

   Click the + (plus sign), double-click **Untitled** and give your paper size a name, then define its size and margins and click **OK**.

   Select your new page size from the **Paper Size** drop-down menu.

6. Choose the appropriate **Orientation** and **Scale** for printing.
7. **Select Print Settings** from the drop-down menu. You see this screen:

8. If you created a custom paper size for your roll paper, select the **Auto Expand** or **Retain Size** option in the **Paper Size** drop-down menu. See page 112 for details.

9. Select the **Media Type** that corresponds to the paper you are printing on. See the table on page 139 for more information.

10. Set the **Color** option as follows:

    - Select **Off (No Color Adjustment)** to disable color management in the printer driver. Choose this mode when you use a color-managed ICC workflow in Photoshop or another software application. See page 141 for instructions.

    - Select **Color Controls**, then choose one of the mode settings shown at the left in the drop-down menu:
EPSON Standard (sRGB) increases the contrast in images. Use this setting for color photographs.

Charts and Graphs intensifies colors and lightens the midtones and highlights of an image. Use this setting for presentation graphics.

11. Choose one of the following Print Quality settings:

- Draft - 360 dpi
- Fine - 720 dpi
- Fine - 1440 dpi
- SuperFine - 1440 dpi

12. Choose any of the following advanced options:

- Super MicroWeave® for maximum elimination of banding (may not be available for certain media types).
- High Speed for fast, bidirectional printing. For higher quality, make sure you deselect this option.
- Flip Horizontal for printing a mirror image of your file.
- Finest Detail for sharper edges on vector-based data including text, graphics, and line art. (This setting does not affect photographs and is not recommended for large files.)

Note: The Print Quality settings available depend on the Media Type you selected. Choose a lower print quality setting for faster printing or SuperFine - 1440 dpi for the best quality.
Choosing Advanced Media Control Options

Follow these instructions if you are using non-Epson media and you need to fine-tune its performance.

1. Select Advanced Media Control from the drop-down menu. You see this screen:

![Advanced Media Control Screen]

2. Select the correct settings to match your ICC profile. These settings override any paper configuration settings you may have made using the printer’s control panel.

- **Color Density** lets you control the ink saturation level.
- **Drying Time per Print Head Pass** lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 5 seconds after each pass to allow ink to dry on the page.
- **Drying Time per Page** lets you print with non-Epson media and avoid smearing the ink.

**Note:** You may need to change the Color Density setting if your custom color profile was created to optimize D-max and color gamut.
- **Paper Feed Adjustment** helps reduce banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.

- **Paper Thickness** helps reduce vertical banding and creates a sharper image when printing on unusually thick or thin paper.

- **Paper Suction** lets you decrease the paper suction level when printing on thinner papers (less than 12 lb), such as CAD drafting paper.

- **Platen Gap** lets you fine-tune the setting for various paper thicknesses.

- **Roll Paper Back Tension** lets you adjust the tension when printing on roll paper. Change the value if you find wrinkles on your printouts when Auto is selected.
Choosing Roll Paper Settings

If you are printing on roll paper, make sure you choose one of the roll paper options as the Page Layout setting, as described on page 114. In addition, you need to check these settings for various cutting and feeding options.

1. Select Roll Paper Settings from the drop-down menu. You see this screen:

2. Choose one of the following Auto Cut Settings:
   - **Normal Cut** allows margin space at the top and bottom of each image.
   - **Double Cut** extends the space between the images and trims each print individually. This provides the cleanest edge for borderless printing.
   - **Single Cut** allows images to be printed end-to-end and saves paper. With borderless printing, you may see a sliver of the previous or next image if you print multiple images in one print job. You will see a white margin between print jobs.

**Note:** These settings override settings made through the control panel.
• Off disables automatic cutting. Choose this setting if you want to operate the cutter manually, use the optional Auto Take-Up Reel, or print multiple print jobs without cutting.

See page 69 for instructions on using the Paper cut button to operate the cutter.

3. Select the following options, if desired:

• Auto Rotate saves paper if your document length is shorter than the printable width of the roll. The document is automatically rotated 90 degrees and printed crosswise. When this option is checked, be sure to select the width of your roll paper from the drop-down menu.

• Print Page Line prints trim lines on the right and bottom edges of your pages.

• Save Roll Paper saves paper by not feeding the blank portion of the last page of your document (available only when you’ve selected a Paper Size setting with the Roll Paper - Banner option).
Controlling Borderless Image Expansion

To control the amount of expansion when printing using a Paper Size with the Auto Expand option, select Roll Paper Settings from the drop-down menu. You see this screen:

![Roll Paper Settings](image)

Adjust the slider to increase or decrease the amount of expansion.

The widths shown in the table on page 112 work with the Standard Expansion setting.

- Use the Min setting to minimize the amount of image clipping. You may see a white border around your image.
- Use the Max setting to maximize the image width. This will increase the amount of image clipping.
Creating a Custom Preset and Printing

Once you’ve made the correct settings for your print job, create a custom preset. This will save you time when you use the same profile/printer/ink/media combination for future print jobs.

1. Select **Summary** from the drop-down menu.

2. After verifying that your settings are correct, select **Save As** from the **Presets** drop-down menu.

3. Type a name for your custom preset and click **OK**.

4. When you’re ready to print, click the **Print** button.

Whenever you want to print with your custom preset, select it from the **Presets** drop-down menu.

**Note:** If you check the settings on each screen in the drop-down menu, go through them carefully from top to bottom. Avoid cycling through them repeatedly, or you may lose your settings.  

**Caution:** Do not open and close the **Presets** menu without typing a name, or you will lose your settings.
Managing Print Jobs

After you click Print, you can monitor the progress of your print job. Follow these steps:

1. Click the icon for your printer on the Dock. If necessary, double-click your printer (and print queue) name. You see a screen like this:

   ![Print Job Screen](image)

   **Note:** If it is no longer spooling in the computer, you can also cancel a print job by pressing the II button on the printer, selecting JOB CANCEL, and pressing the OK button.

2. From here you can monitor the progress of your print job or do one of the following:
   - Click the print job, then click **Delete** to cancel the job
   - Click the print job, then click **Hold** to pause printing
   - Click a print job marked “Hold” and click **Resume** to resume printing

3. When you’re finished, close the print job window, then close your printer window.
Printing With Mac OS X 10.4

If you’re using Mac OS X 10.4, follow the instructions below. If you’re using Mac OS X 10.6 or 10.5, see page 113.

Choosing Page Setup Options

Page Setup options let you choose from several options for printing on cut sheets or roll paper. You can also select the orientation of your image and the paper size. For printing on roll media, creating a custom page size is recommended to make the best use of your paper.

Note the following limitations on borderless printing:

- Borderless printing takes longer than normal printing.
- Margins are required at the top and bottom of the page on cut sheets. Full borderless printing is available on roll paper only.

1. Open the file you want to print and select Page Setup in your application. You see this screen:

![](image)

Note: Select your printer

Note: If you need more information about print options, click the ? button.

2. Open the Format for drop-down menu and select your printer.
3. Click the **Paper Size** drop-down menu.

- If you’re printing on a cut sheet, choose the size of the paper you are using and one of the options listed below. Then continue with step 5.
- If you’re using roll paper, Epson recommends that you create a custom paper size to make the best use of your paper. See step 4 for instructions. Also be sure to select roll paper options, as described on page 134.

The following settings are available, depending on the size you choose:

- The **Sheet** size setting prints on cut sheet paper with a bottom margin larger than the top and sides.
- **Sheet - Borderless (Auto Expand)** prints on cut sheets and enlarges your image (up to 3%) to fit the width of the paper (without side borders).
Sheet - Borderless (Retain Size) prints your image at the size you specify in your application. You need to size it slightly wider than the paper width to print without side borders.

Roll Paper - Borderless (Auto Expand) prints without borders on roll paper and enlarges your image (up to 3%) to fit the size of the paper. This selection is recommended for borderless printing with minimal clipping of your image. See page 112 for more information.

Roll Paper - Borderless (Retain Size) prints your image on roll paper at the size you specify in your application. You need to size it slightly wider than the paper width to print without borders. See page 112 for more information.

Roll Paper - Banner prints a series of continuous images without any margin space between them, but with normal side borders.

Roll Paper - Borderless Banner prints a series of continuous borderless images without space between them.

4. If you are printing on roll paper, choose Manage Custom Sizes from the Paper Size menu.

(If you are printing on a cut sheet, skip to step 5.)

Click the + (plus sign), double-click Untitled and give your paper size a name, then define its size and margins and click OK.

Select your new page size from the Paper Size drop-down menu.
5. Choose the appropriate Orientation and Scale for printing.

6. Click OK. Then continue with the instructions in the next section.

Choosing Basic Print Options

Once you have selected your page setup options, you need to select printing options. The Epson driver offers automatic settings that optimize print quality and speed when you’re using Epson media. You can also choose additional settings for more control over your printer and color output.

1. Select Print in your application. You see the screen shown below:

   ![Print Screen]

   Select your printer

2. Choose your printer from the Printer menu.
3. Select **Print Settings** from the **Copies & Pages** drop-down menu. You see this screen:

![Print Settings Screen](image)

**Note:** In certain programs, you may need to select **Advanced** before you can select **Print Settings.** For more information about printer settings, click the ? button.

4. If you created a custom paper size for your roll paper, select the **Auto Expand** or **Retain Size** option in the **Page Setup** drop-down menu. See page 112 for details.

5. Select the **Media Type** that corresponds to the paper you are printing on. See the table on page 139 for more information.

   If you are using a color-managed workflow, make sure you choose media type and resolution settings that match the ICC profile you are using.

6. For the **Color** setting, select one of the following:
   - **Color/B&W Photo** for any type of photographic printing.
   - **Black** only if you’re printing line drawings or other non-photographic images.
7. Set the **Mode** option as follows:

- Click **Automatic** to have the printer driver analyze the contents of your image or file and make the appropriate printing adjustments. If a **Quality/Speed** slider appears, set it according to the priorities of your print job.

You can choose one of the mode settings shown at the left in the drop-down menu:

- **Charts and Graphs** intensifies colors and lightens the midtones and highlights of an image. Use this setting for presentation graphics.
- **EPSON Standard (sRGB)** increases the contrast in images. Use this setting for color photographs.

- Click **Advanced Settings** to access additional options, as described in the remaining steps.

8. Choose one of the following **Print Quality** settings:

- **Draft - 360 dpi**
- **Fine - 720 dpi**
- **Fine - 1440 dpi**
- **SuperFine - 1440 dpi**

9. Choose any of the following advanced options:

- **Super MicroWeave** for maximum elimination of banding (may not be accessible for certain media types).
- **High Speed** for fast, bidirectional printing. For higher quality, make sure you deselect this option.
- **Flip Horizontal** for printing a mirror image of your file.
- **Finest Detail** for sharper edges on vector-based data including text, graphics, and line art. (This setting does not affect photographs and is not recommended for large files.)

Continue with the instructions on page 132 to select color management settings. If you are using the color management settings in Photoshop or another application, it is very important to turn off color management in the printer driver.
Choosing Color Management Options

Follow these instructions to use color management in the printer driver.

1. Select Printer Color Management from the drop-down menu, then click Advanced Settings. You see this screen:

   ![Printer Color Management Screen]

2. Select one of the following settings:
   - **Color Controls** to choose from three color adjustment modes and from two Gamma settings. Click the arrow next to Advanced Settings to specify individual values for brightness, contrast, saturation, and CMY inks. When you use the driver to perform color management, make sure you turn it off in your application.
   - **ColorSync** for mapping colors to your printer’s profile. In most cases, you will get better results by applying color management in your application, rather than in the printer driver. If you choose this setting, you can choose ColorSync from the drop-down menu and choose filters or other settings.
• Off (No Color Adjustment) to disable color management in the printer driver. Choose this mode when you use a color-managed ICC workflow in Photoshop or another software application. See page 141 for instructions.

Choosing Paper Configuration Options

Follow these instructions if you are using non-Epson media and you need to fine-tune its performance.

1. Select Paper Configuration from the drop-down menu. You see this screen:

   ![Paper Configuration Screen]

2. Select the correct settings to match your ICC profile. These settings override any paper configuration settings you may have made using the printer’s control panel.

   • Color Density lets you control the ink saturation level.
   
   • Drying Time per Print Head Pass lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 5 seconds after each pass to allow ink to dry on the page.
   
   • Drying Time per Page lets you print with non-Epson media and avoid smearing the ink.

Note: You may need to change the Color Density setting if your custom color profile was created to optimize D-max and color gamut.
• **Paper Feed Adjustment** helps reduce banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.

• **Paper Thickness** helps reduce vertical banding and creates a sharper image when printing on unusually thick or thin paper.

• **Paper Suction** lets you decrease the paper suction level when printing on thinner papers (less than 12 lb), such as CAD drafting paper.

• **Platen Gap** lets you fine-tune the setting for various paper thicknesses.

• **Roll Paper Back Tension** lets you adjust the tension when printing on roll paper. Change the value if you find wrinkles on your printouts when **Auto** is selected.

### Choosing Roll Paper Options

If you are printing on roll paper, make sure you choose one of the roll paper options as the **Paper Size** setting, as described on page 126. In addition, you need to check these settings for various cutting and feeding options.

1. Select **Roll Paper Option** from the drop-down menu. You see this screen:

   ![Roll Paper Option Screen](image)

2. Choose one of the following **Auto Cut** settings:

   • **Normal Cut** allows margin space at the top and bottom of each image.

   **Note:** These settings override settings made through the control panel.
• **Double Cut** extends the space between the images and trims each print individually. This provides the cleanest edge for borderless printing.

• **Single Cut** allows images to be printed end-to-end and saves paper. With borderless printing, you may see a sliver of the previous or next image if you print multiple images in one print job. You will see a white margin between print jobs.

• **Off** disables automatic cutting. Choose this setting if you want to operate the cutter manually, use the optional Auto Take-Up Reel, or print multiple print jobs without cutting.

  See page 69 for instructions on using the ➔ Paper cut button to operate the cutter.

3. Select either of the following options, if desired (available only when you’ve selected a Paper Size setting with the Roll Paper - Banner option):

  • **Print Page Line** prints trim lines on the right and bottom edges of your pages.

  • **Save Roll Paper** saves paper by not feeding the blank portion of the last page of your document.
Controlling Borderless Image Expansion

To control the amount of expansion when printing using a Paper Size with the Auto Expand option, select Expansion from the drop-down menu. You see this screen:

Adjust the slider to increase or decrease the amount of expansion.

The widths shown in the table on page 112 work with the Standard Expansion setting.

- Use the Min setting to minimize the amount of image clipping. You may see a white border around your image.
- Use the Max setting to maximize the image width. This will increase the amount of image clipping.

Creating a Custom Preset and Printing

Once you’ve made the correct settings for your print job, create a custom preset. This will save you time when you use the same profile/printer/ink/media combination for future print jobs.

1. Select Summary from the drop-down menu.

Note: If you check the settings on each screen in the drop-down menu, go through them carefully from top to bottom. Avoid cycling through them repeatedly, or you may lose your settings.
2. After verifying that your settings are correct, select **Save As** from the **Presets** drop-down menu.

3. Type a name for your custom preset and click **OK**.

4. When you’re ready to print, click the **Print** button.

Whenever you want to print with your custom preset, select it from the **Presets** drop-down menu.

**Caution:** Do not open and close the **Presets** menu without typing a name, or you will lose your settings.
Managing Print Jobs

After you click Print, you can monitor the progress of your print job. Follow these steps:

1. Click the icon for your printer on the Dock. If necessary, double-click your printer (and print queue) name. You see a screen like this:

   ![Print Job Screen](image)

   **Note:** If it is no longer spooling in the computer, you can also cancel a print job by pressing the Pause/reset button on the printer, selecting JOB CANCEL, and pressing the OK button.

   2. From here you can monitor the progress of your print job or do one of the following:
      - Click the print job, then click **Delete** to cancel the job
      - Click the print job, then click **Hold** to pause printing
      - Click a print job marked “Hold” and click **Resume** to resume printing

2. When you’re finished, close the print job window, then close your printer window.
Selecting the Correct Media Type Setting

The following table lists the settings designed to produce the best results on Epson media.

If your paper is not listed, check the instructions included with the paper, or look on the Epson website www.proimaging.epson.com (U.S. sales), www.epson.ca (Canadian sales). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

* Other Media Type settings in the list can be used to experiment with other paper types.
For the most precise color in your prints, you can use profiles designed specifically for your printer model and paper type. Basic profiles are installed with your printer driver. For a list of the profiles and their corresponding media types, see page 197 (roll paper types) or page 200 (cut sheet paper types).

Assigning a profile to your image doesn’t alter it, only the interpretation of it by your software and how it appears on your monitor and in a printout. This is the best way to improve the color balance and contrast in your image.

Follow the instructions in this chapter to use Photoshop 7, CS, CS2, or CS3 to print with profiles using Photoshop color management (the steps show only CS3 screens). It’s important to turn off color management in your printer software when you use Photoshop color management or you’ll get unexpected results. See one of these sections for instructions:

- “Macintosh Printing With a Color Profile” below
- “Windows Printing With a Color Profile” on page 145

**Macintosh Printing With a Color Profile**

First you set up your color management environment in Photoshop and assign a profile to your image, then you select your print settings and print.

**Setting Up Photoshop and Assigning a Profile**

1. Open Adobe Photoshop.

2. Select Color Settings from the Photoshop or Edit menu.
You see this window:

3. Select U.S. Prepress Defaults or North America Prepress 2 from the Settings menu to set Adobe RGB (1998) as the color space. Click OK.

4. Open the photo you want to print.

   If you see an Embedded Profile Mismatch message, select Use the embedded profile and click OK.

   If you see a Missing Profile message, select Assign working RGB: Adobe RGB (1998) and click OK.

5. When your image appears, evaluate the color balance and contrast. If they need improvement, select Image > Mode > Assign Profile or Edit > Assign Profile. Then select one of the following as the Profile setting:

   - A different RGB working space, such as ColorMatch RGB or sRGB IEC61966-2.1
   - A scanner profile for your scanner
   - A camera profile for your digital camera

   Also click the Preview box so you can see the effects of your profile choice on the screen.
6. Select File, then click Print or Print with Preview.

![Image of printer setup dialog box]

7. Click More Options or Show More Options, then select Color Management.

8. Click Page Setup, select page settings as necessary, and click OK.

9. Under Color Handling, select Let Photoshop Determine Colors or Photoshop Manages Colors.

10. Under Profile or Printer Profile, select a profile for your printer and the paper you’ll use, such as Pro9700_7700_PremiumSemigloss PhotoPaper250.icc.

11. As the Intent or Rendering Intent setting, select Relative Colorimetric or Perceptual, and click the Black Point Compensation checkbox.

**Note:** If your image contains very saturated colors, select Perceptual. This reduces the color saturation so that the colors fit within the printer’s color gamut.
Selecting Print Settings and Printing

1. Click the Print button, select Epson Stylus Pro 7700 or Epson Stylus Pro 9700, and select Printer Settings or Print Settings.

2. Select the Media Type setting for your paper (see page 139).

3. Set the rest of the print settings you want to use (beginning on page 130).

4. Do one of the following:

   For Mac OS X 10.6 and 10.5, make sure Color Mode is set to Off (No Color Management).
For Mac OS X 10.4, select **Printer Color Management**, then select **Off (No Color Adjustment)**.

For Windows Printing With a Color Profile

First you set up your color management environment in Photoshop and assign a profile to your image, then you select your print settings and print.

**Setting Up Photoshop and Assigning a Profile**

1. Open Adobe Photoshop.
2. Select **Color Settings** from the Edit menu.

5. Click **Print** to print your photo.
You see this window:

3. Select U.S. Prepress Defaults or North America Prepress 2 from the Settings menu to set Adobe RGB (1998) as the color space. Click OK.

4. Open the photo you want to print.

   If you see an Embedded Profile Mismatch message, select Use the embedded profile and click OK.

   If you see a Missing Profile message, select Assign working RGB: Adobe RGB (1998) and click OK.

5. When your image appears, evaluate the color balance and contrast. If they need improvement, select Image > Mode > Assign Profile or Edit > Assign Profile. Then select one of the following as the Profile setting:

   • A different RGB working space (or Profile), such as ColorMatch RGB or sRGB IEC61966-2.1
   • A scanner profile for your scanner
   • A camera profile for your digital camera
Also click the Preview box so you can see the effects of your profile choice on the screen.

6. Select Page Setup from the File menu, select your page settings, and click OK.

7. Select File, then select Print or Print with Preview.

8. Click More Options or Show More Options, then select Color Management.

9. Under Color Handling, select Let Photoshop Determine Colors or Photoshop Manages Colors.

10. Under Profile or Printer Profile, select a profile for your printer and the paper you’ll use, such as Pro9700_7700_PremiumSemigloss PhotoPaper250.icc.

11. For the Intent or Rendering Intent setting, select Relative Colorimetric or Perceptual, and click the Black Point Compensation checkbox.

Note: If your image contains very saturated colors, select Perceptual. This reduces the color saturation so that the colors fit within the printer’s color gamut.
Selecting Print Settings and Printing

1. Click the Print button, select your printer, and click Properties or Preferences.

2. Make sure the Main tab is selected.

3. Select the Media Type setting for your paper (see page 88).

4. Set the rest of the print settings you want to use (beginning on page 88).

5. For the Mode setting, select Custom. Then select No Color Adjustment.

6. Click OK, then click Print to print your photo.

Note: Make sure that you select Off (No Color Adjustment). If you don’t, the printer driver will apply additional correction to the image data, producing inaccurate results.

If you selected the wrong combination of source profile, printer profile, and color management settings, you’ll get unexpected results.
Chapter 6: Maintaining and Transporting the Printer

The Epson Stylus Pro 7700 and Pro 9700 require little maintenance to keep working at their best. This chapter describes the following routine procedures:

- Checking printer status
- Checking and cleaning the print head
- Aligning the print head
- Replacing ink cartridges
- Changing the date and time
- Performing additional maintenance tasks
- Replacing the paper cutter blade
- Replacing the maintenance tank
- Cleaning the printer
- Transporting or storing the printer

In addition to the features described in this chapter, you can also use the menu system on the printer to fine-tune a variety of printer settings. For more information, see page 217.

Checking Printer Status

Using the control panel, you can check the amount of ink remaining, the total number of prints, and the status of your maintenance tank(s), and other information. You can print out a status check (described in the next section), or view the printer’s status on the LCD display (see page 150) or a printer driver screen (see page 151).
Printing Status Information

The status check sheet shows some of the current default settings, the page count, and the status of the maintenance tank.

1. Make sure paper is loaded in the printer.

2. Press ▲ Menu.

3. Press ▼ to select TEST PRINT, then press ▲.

4. Press ▼ to select STATUS SHEET, then press ▲.

5. Press OK to start printing.

Viewing Status Information

1. Press ▲ Menu.

2. Press ▼ to select PRINTER STATUS, then press ▲.

3. Do one of the following:
   - To check the firmware version, press ▲ again. When done, press ▼.
   - To check the amount of ink left, press ▼ to select INK LEVEL, then press ▲. The percentage of ink left in the first cartridge is displayed. Continue pressing ▼ to see the status of the remaining cartridges. When done, press ▼.
   - To check how much capacity the maintenance tank(s) have, press ▼ to select MAINTENANCE TANK, then press ▲. The percentage remaining for each tank is displayed. As the tank is filled, the percentage drops. When done, press ▼.
   - To check job history, press ▼ to select JOB HISTORY, then press ▲. For the last 10 print jobs saved in the printer, you see the ink used (in milliliters) and paper used (in square centimeters). The most recent job is saved as No. 0. When done, press the ▼ button.
   - To check the total number of prints, press ▼ to select TOTAL PRINTS, then press ▲. When done, press ▼.

**Checking Printer Status From the Printer Driver**

The Epson Status Monitor utility installed with your printer driver lets you check the levels of ink in the printer and the level of the maintenance tank(s). Follow the steps below to use the utility to check the status.

1. Do one of the following to access the printer utilities:
   - **Windows 7 and Windows Vista**: Click \( \text{Start} \), select Control Panel, select Hardware and Sound, and click Printers. Right-click the icon for your printer and select Printing Preferences. Click the Utility tab.
   - **Windows XP**: Click Start and select Control Panel. Double-click Printers and Faxes. Right-click your printer icon and select Printing Preferences. Click the Utility tab.
   - **Mac OS X**: Open the EPSON Printer Utility3 in your Applications folder. Select your printer and click OK.

2. Click the EPSON Status Monitor 3 icon.
The software checks the amount of ink in the printer and maintenance tank(s) and displays one of these windows:

![Windows](image1.png) ![Mac OS X](image2.png)

### Checking and Cleaning the Print Head

If your printed image shows a color shift or horizontal lines, you should check the print head to see if any nozzles are clogged or deflected. If necessary, you can run a cleaning cycle to clear the nozzles.

You can also turn on Auto Nozzle Check from the printer’s control panel. The printer will then check the nozzles periodically or before each print job and clean them if necessary.

### Running the Nozzle Check and Head Cleaning Utilities

Follow these steps to use your printer software to check the print head nozzles and clean them if necessary:

1. Make sure paper is loaded in the printer.
2. Do one of the following to access the printer utilities:
   - **Windows 7 and Windows Vista**: Click , select **Control Panel**, select **Hardware and Sound**, and click **Devices and Printers**. Right-click the icon for your printer and select **Printing Preferences**. Click the **Utility** tab.

**Tip**: On a Macintosh, you can also run maintenance utilities by clicking the **Utility** button in the print job window or the icon on the printer settings screen.

If you added a shortcut icon for your printer to the Windows taskbar, you can right-click it and select any utility you want to run. See page 110 to add the icon.
• **Windows XP**: Click **Start** and select **Control Panel**. Double-click **Printers and Faxes**. Right-click your printer icon and select **Printing Preferences**. Click the Utility tab.

• **Mac OS X**: Open the **EPSON Printer Utility3** in your **Applications** folder. Select your printer and click **OK**.

You see a menu like the following:

3. Select the **Nozzle Check** icon and follow the instructions on the screen.

4. After the pattern is printed, use at least a 10× eye loupe to examine it.
   
   • If the pattern looks good, as shown below, the print head is clean.

   ![Nozzle Check Pattern](image)

   • If any dots or segments are missing or deflected, as shown below, run a cleaning cycle as described on page 155. Then print another nozzle check pattern to make sure the nozzles are clean.

   ![Deflected Pattern](image)

   **Caution**: Don’t run a cleaning cycle while thick media is loaded in the printer.

• If the nozzles are still clogged after three cleaning cycles, run a power cleaning cycle as described on page 155.
Checking and Cleaning the Print Head Using the Control Panel

You can print a nozzle check from the control panel and examine it to determine whether any nozzles are clogged or deflected. Then you can run a cleaning cycle if necessary.

1. Press ▶ Menu.

2. Press ▼ until TEST PRINT is selected, then press ▶. NOZZLE CHECK is selected.

3. Press ▶, then press OK to start printing the nozzle check pattern.

4. After the pattern is printed, use at least a 10× eye loupe to examine it.
   - If the pattern looks good, as shown below, the print head is clean.
     ![Nozzle check pattern](image)
   - If any dots or segments are missing or deflected, as shown below, run a cleaning cycle as described on page 155. Then print another nozzle check pattern to make sure the nozzles are clean.
     ![Deflected nozzle check pattern](image)
   - If the nozzles are still clogged after three cleaning cycles, run a power cleaning cycle as described on page 155.

Caution: Don’t run a cleaning cycle while thick media is loaded in the printer.

Automatically Checking and Cleaning the Print Head

The printer automatically checks the nozzles and cleans them if necessary. You can specify how often you want this to happen or turn this feature off. You can also have a nozzle check pattern printed on a regular basis, so you can check it yourself.

1. Press ▶ Menu. PRINTER SETUP is selected. Press ▶ again.

2. Press ▼ until AUTO NOZZLE CHECK is selected, then press ▶.
3. Select one of the following, then press OK:
   - **ON: PERIODICALLY**—The printer periodically checks its nozzles and runs a cleaning cycle if necessary (default).
   - **ON: EVERY JOB**—The printer automatically checks its nozzles and runs a cleaning cycle if necessary before each print job. This process uses a very small amount of ink (and no paper) and is recommended if you are running large print jobs unattended.
   - **OFF**—The printer will not perform automatic nozzle checks and cleaning cycles.

4. Press ▼, then select PRINT NOZZLE PATTERN and press ▶.

5. Select **ON: EVERY PAGE** to have the nozzle check pattern printed before each print job, or **ON: EVERY 10 PAGES** or **OFF**. These settings take effect only when you print on roll paper.

6. Press **OK** to save the setting.

### Running Cleaning Cycles

You can run several types of cleaning cycles from the control panel (or from the Epson LFP Remote Panel2): normal cleaning, power cleaning, and cleaning each pair of ink colors.

Run the power cleaning only if the normal cleaning process is not sufficient to clear the nozzles. The power cycle uses a large quantity of ink, so it is recommended only as a last resort.

The cartridges need to be at least 50% full to use power cleaning. You may need to replace a low cartridge to run the cleaning cycle. After cleaning, you can reinsert the old cartridge.

1. Print a nozzle check to make sure the print head needs cleaning, as described on page 154.

2. Make sure the printer is ready and the red ▼ Ink Check light on the printer’s control panel is not on or flashing.

3. Press ▶ Menu.
4. Press ▼ until MAINTENANCE is selected, then press ►.

5. Press ▼ until CLEANING is selected, then press ►.

6. Select one of the following, then press ►:
   - NORMAL CLEANING—Press OK to start the cleaning cycle.
   - CLEAN EACH COLOR—Press ►, select the color pair you want to clean, then press OK to start the cleaning cycle.
   - POWER CLEANING—Press OK to start the cleaning cycle.

7. When cleaning is finished and the power light stops flashing, print the nozzle check again to confirm that the head is clean.

   For effective cleaning, always run a nozzle check between cycles.

   If the pattern is still missing segments or has deflections after a power cleaning cycle, turn the printer off and leave it overnight, then clean the print head again the following morning with regular cleaning cycles. If you still see no improvement, contact your service provider for assistance.

**Aligning the Print Head**

Aligning the print head is the most important thing you can do to ensure the best print quality. If banding appears on your prints, if they look grainy or blurry, or if you see misregistration or “ghosting,” you need to align the print head.

Although you can align the print head using the printer utility software, it’s also easy to align from the printer’s control panel. This will do the most thorough job in the shortest time, and it’s all automatic.

If you haven’t already done so, it’s a good idea to run a nozzle check before aligning the print head (page 154). This ensures that the print head alignment patterns print correctly.

Follow these steps to align the print head using the control panel:

1. Make sure the printer is turned on. Then load Epson Enhanced Matte paper.
2. Press ▶ Menu.

3. Press ▲ or ▼ until HEAD ALIGNMENT is selected, then press ▶. PAPER THICKNESS is selected.

4. Press ▶, then select the paper type loaded in the printer and press OK.

5. Press ◀ three times, then press ▼ to select ALIGNMENT.

6. Press ▶ to select AUTO, then press ▶ again. UNI-D (uni-directional) is highlighted. This is the type of alignment to start with.

7. Press ▶, then press OK to start the alignment process.

   Each head alignment takes about 7 minutes. The printer’s white beam sensor reads the alignment pattern and adjusts the printer automatically. Make sure you don’t open the front cover or turn off the printer during this process.

8. When the uni-directional alignment is finished, press ▶.

9. Select HEAD ALIGNMENT, then select ALIGNMENT.

10. Select BI-D ALL and press OK to start the alignment process.

11. When done, press ◀ to exit head alignment mode.

**Replacing Ink Cartridges**

Before you begin a large print job, you should check your ink levels. If one of your cartridges is low, you can replace it before you start. Or you can wait until the ink is expended, replace the cartridge, and then continue the job without any loss of print quality. However, it is best to replace a low ink cartridge before starting a large print job.

The easiest way to check ink levels is from the control panel LCD display. The numbers above the ink icons on the LCD display correspond to the 5 ink cartridge slots on the printer.

The icons show the approximate amount of ink remaining.

**Tip:** You can store partially used ink cartridges for up to 6 months. If you do so, Epson recommends covering the openings with tape.
When the red \( \checkmark \) Ink Check light is flashing and \textit{INK LOW} appears on the LCD display, the indicated cartridge is almost expended. Make sure you have a replacement cartridge. When the light stays on and \textit{REPLACE INK CARTRIDGE} is displayed, the cartridge is expended. You must replace the cartridge before you can continue printing.

You can install any combination of 150, 350, and 700 ml cartridges. Use the following Epson UltraChrome\textsuperscript{®} with Vivid Magenta ink cartridges:

You can purchase genuine Epson ink and paper from an Epson Professional Imaging Authorized Reseller. To find the nearest reseller, visit www.proimaging.epson.com (U.S. sales), www.epson.ca (Canadian sales), or call 800-GO-EPSON (800-463-7766). Or you can purchase online at www.proimaging.epson.com (U.S. sales) or www.epson.ca (Canadian sales).

Before you start, make sure the printer is turned on. Then follow these steps:

1. Note the color of the cartridge that is low or expended.
2. Press the \( \mathbf{A} \) button.
3. Open the ink cover all the way.

\textbf{Note:} We recommend that you use genuine Epson cartridges and do not refill them. The use of other products may affect your print quality and could result in printer damage.

Yields vary considerably based on images printed, print settings, paper type, frequency of use, and temperature. For print quality, a small amount of ink remains in the cartridge after the “replace cartridge” indicator comes on.

For best printing results, use up a cartridge within six months of opening the package.

\textbf{Caution:} Leave the expended cartridge in the printer until you are ready to replace it.

To prevent ink reporting errors, never replace the ink cartridges with the printer turned off.
4. Then press in the cartridge you want to replace. The cartridge pops out.

5. Remove the expended ink cartridge from the printer. It’s a good idea to save your first set of expended cartridges so you can use them for transporting the printer, if necessary.

6. Make sure the replacement cartridge is the correct color and remove it from its package. Gently shake the cartridge for about 5 seconds before installing it.

**WARNING:** Do not shake the expended cartridge, or ink may leak out. If ink gets on your hands, wash them thoroughly with soap and water. If ink gets in your eyes, flush them immediately with water.
7. Hold the cartridge with the arrow pointing toward the printer. Then insert the cartridge into the slot until it clicks into place. Don’t force it in.

8. Close the ink cover.

Once the cartridge is installed, the printer returns to its READY state.

**Note:** If you can’t insert the cartridge smoothly, you may have the wrong cartridge. Check the package and product code. If the Ink light remains on after installing the cartridge, it may not be inserted fully.

**Caution:** Do not remove and re-insert cartridges more often than necessary. Doing so can compromise the needle valve seal and allow air to enter the ink tubes, causing nozzle damage.
Changing the Date and Time

1. Press ▲Menu.
2. Press ▼until MAINTENANCE is highlighted, then press ▲.
3. Press ▼until you see CLOCK SETTING, then press ▲.
4. Use the ▼, ▲, and ▲ buttons to set each item in the date and time, displayed in the following format: MM/DD/YY HH:MM.
5. Press OK to save the setting.

Using Maintenance Mode

Maintenance mode allows you to make special settings and perform maintenance procedures that may be needed occasionally. You can use maintenance mode to do the following:

- Change the language or units of measurements used on the printer’s control panel menus.
- Adjust the maximum value for roll paper tension.
- Run a “super strong” cleaning cycle.
- Return all of the printer’s control panel settings to their default values.

Follow these steps to use maintenance mode:

1. Make sure the printer is turned off.
2. Press and hold the button, then press the power button and hold it until the printer turns on and the LCD displays MAINTENANCE MODE.
3. Use the ▼ and ▲ buttons to select the settings described below. If you need to back up to the previous menu level, press ▼.
   - To change the language on the LCD display, press ▼ to highlight LANGUAGE, then press ▲. Press ▼ until you see the language you want, then press OK to select it. The printer exits maintenance mode and returns to normal operation.
• To change the units of measurement, press ▼ to highlight LENGTH UNITS, then press ►. Press ▼ to switch from METRIC to FEET/INCH, then press OK to select it. Press ◀ when done.

• To change the temperature units of measurement, press ▼ to highlight TEMPERATURE UNITS, then press ►. Press ▼ to switch from °C (Celsius or centigrade) to °F (Fahrenheit), then press OK to select it. Press ◀ when done.

• To change the maximum roll paper tension, press ▼ to highlight ROLL PAPER TENSION, then press ►. Press ▼ to decrease the maximum value, or ▲ to increase it (from 1 to 5). Press OK to select the setting you want.

• To run a super strong cleaning cycle, press ▼ to highlight SS CLEANING, then press ► to display EXECUTE. Press OK to start the cleaning cycle.

• To return all control panel settings to their default values, press ▼ to highlight DEFAULT PANEL, then press ► to display EXECUTE. Press OK to restore the default settings.

4. To exit maintenance mode, turn off the printer by pressing the ⚪ power button. Press the ⚪ power button again to turn on the printer in the normal operating mode.

Replacing the Paper Cutter

If you notice that your paper isn’t being cut cleanly, the cutter may need to be replaced.

You can obtain a new cutter from Epson (part number C12C815331). See page 12 for ordering details.

Removing the Old Cutter

Make sure the printer is turned on, then follow these steps to remove the blade:

1. Press ► Menu.

2. Press ▼ until MAINTENANCE is highlighted, then press ►.
3. Press ▼ until CUTTER REPLACEMENT is highlighted, then press ► again.

4. Press OK. The paper cutter moves to the replacement position.

5. To remove the cutter cover, press in the tab and pull it down.

6. Loosen the screw using a cross-head screwdriver.
7. Carefully remove the cutter.

8. Dispose of the cutter in accordance with local regulations.

**Installing the New Cutter**

Remove the new blade from its package, then follow these steps to install it:

1. Insert the new cutter into the holder. Make sure the cutter pin goes into the hole.
2. Tighten the screw using a cross-head screwdriver.

3. Align the cover, then press it in until it clicks into place.

4. Press OK to finish the replacement process. The cutter moves to home position.

5. Run the Cutter Adjustment from the Maintenance Menu on the control panel.

After you print the pattern, put the two cut pieces together and select the pattern with the most precise cut between the two colors. Select the pattern number on the control panel and press OK.
Replacing the Maintenance Tank

The maintenance tank stores ink that gets flushed from the system during the initial ink charge and manual and automatic print head cleaning. When the tank is almost full, the message **MAINTENANCE TANK NEARLY FULL** appears on the LCD display. When the tank is completely full, the printer stops working and **MAINTENANCE TANK FULL** appears on the LCD.

You can check how much space remains in the maintenance tank by viewing its icon on the control panel, shown below. You can also check its status using the menus (see page 150), using your printer software (see page 151), or by printing a nozzle check sheet (see page 154).

The icon(s) show the approximate amount of space remaining in the tank(s).

The Epson Stylus Pro 7700 has one maintenance tank (on the right side), and the Pro 9700 has two (one on either side). Replacement tanks are available from Epson (part number C12C890191). See page 12 for details.

**The printer will not print if one of the maintenance tanks is full.** On the Epson Stylus Pro 9700, the right tank is used more than the left. To maximize tank life, you can switch the tanks when the right tank reaches approximately 40% to 60% of capacity.

Follow these steps to replace the tank:

1. If you have the Epson Stylus Pro 9700, check the LCD display to determine which tank needs to be replaced (left or right).

2. Turn off the printer.
3. Grasp the handle at the bottom of the tank (on the side of the printer) and gently pull out the maintenance tank. Then place it in the plastic bag included with the new tank.

**Caution:** Be careful not to spill ink from the maintenance tank when removing it. Hold it upright at all times and dispose of it carefully.

4. Insert the new tank.
Cleaning the Printer

To keep your printer working at its best, clean it if it becomes soiled.

1. If your prints are soiled by ink on the roller, load inexpensive roll paper and press ▼ to feed the paper without printing on it. Press ▼ several times until the paper is clean.

2. Turn off the printer and wait until all the lights are off. Then unplug the power cord and disconnect the printer from your system.

3. Open the front cover and use canned air or a soft lint-free cloth to carefully clean away any dust or dirt inside the printer.

4. Clean the area shown below in the direction of the arrows. If necessary, dampen the cloth, clean the inside of the printer, then dry it with a soft cloth.

**Caution:** Be careful not to touch the gears inside the printer.

To avoid damaging the components as well as the case, never use alcohol or thinners to clean the printer.

Be careful not to get water on the printer mechanism or electronic components.

Don’t use a hard or abrasive brush.

Don’t spray the inside of the printer with lubricants; unsuitable oils can damage the mechanism. Contact your service provider if you think the printer needs lubrication.

Do not touch the gray area, roller, or absorption pads inside the printer; otherwise your prints may be soiled.
5. If your prints are soiled on the back, wipe the blue area carefully.

6. If powdery dust has accumulated, use a toothpick or similar tool to remove it.

7. Remove the paper basket. Then clean away any dust or dirt around the leg assembly using a soft brush.
8. If the outer case is dirty, clean it with a soft, clean cloth dampened with mild detergent. Keep the ink cartridge compartments closed to prevent water from getting inside.

9. To wash the paper basket, remove the shafts, then machine wash with mild detergent and air dry.

**Transporting or Storing the Printer**

If you are moving the printer a short distance (for example, in the same building), you can roll it on its stand (see page 172). To ship the printer a longer distance, you should repack it using the original box and packing materials. Follow the instructions below to prepare the printer for shipment.

If you don’t have the original packaging, you can purchase replacement packaging from Epson. See page 12 for more information.

**Preparing the Printer for Shipment**

1. Turn off the printer and wait until the carriage moves to the home position (on the far right) and the power light goes off. Then unplug the printer.

2. Remove the following parts:
   - Power cord and interface cables
   - Paper basket
   - All paper or other media
   - Optional Auto Take-Up Reel (if installed)

3. Leave the ink cartridges installed.
4. Open the front cover and reinstall the packing material that you removed from the print head during setup. Then close the cover.

Tip: For more secure transportation, tape all doors and covers shut.

5. Before you remove the printer from the stand, make sure the casters are locked.

6. Remove the two wing nuts and lock washers securing the printer to the stand (underneath the printer). Keep them in a safe place.
7. Lift the printer using the hand grips where provided. (See the stickers located near the rear hand grips for the correct holding position.)

![Image of people lifting a printer]

8. Keep the printer level while moving it. See page 173 for information about setting up the printer after transporting it.

To ship the printer a longer distance, you should repack it using the original box and packing materials. If you don’t have the original packaging, you can purchase replacement packaging from Epson. See page 12 for more information.

**WARNING:** The printer is very heavy. Make sure you have four people lift it.

**Caution:** Do not roll the printer on angled or uneven surfaces.

**Moving the Printer on the Stand**

When you need to move the printer a short distance, such as within the same building, you can roll the printer on its casters.

1. Make sure the printer is turned off and the carriage is in the home position (on the far right). If not, turn the printer back on, wait until the carriage moves to the home position, then turn off the printer.

2. Disconnect the power cord and interface cable.

3. Remove any paper and close the roll paper cover. Make sure the front cover is closed.

4. Store the paper basket as described on page 81.
5. Release the front casters.

6. Carefully roll the printer to its new location, then lock the casters.

**Setting Up the Printer After Transportation**

Setting up the printer after transporting it is almost identical to setting it up for the first time.

Keep in mind that the first time you start printing after moving the printer, the print head nozzles may be clogged—especially if the printer hasn’t been turned on for a long time. You may need to run a cleaning cycle (page 152) and realign the print head (page 156) to ensure good print quality.
Chapter 7: Solving Problems

As you use your printer, you may occasionally experience a problem. You can diagnose the problem following the guidelines in this chapter or check the FAQs at www.proimaging.epson.com. Then try the most likely solutions until the problem is fixed.

This chapter provides instructions for the following:

- Diagnosing problems
- Checking error messages and lights
- Improving print quality
- Solving operational problems
- Solving miscellaneous printing problems
- Solving paper problems, including clearing paper jams
- Solving problems with the optional Auto Take-Up Reel
- Uninstalling and reinstalling the printer driver

Diagnosing Problems

The printer includes a number of ways to help you diagnose problems:

- To identify the most common problems, check the messages and lights on the control panel. See pages 176 through 182 for more information.

- If you’re using the Epson printer driver and Status Monitor utility, check your software for error messages. See page 151 for more information.

- To determine whether the problem is caused by the printer itself, print a status sheet from the control panel. See page 149 for instructions.

- Review the FAQs at www.proimaging.epson.com for possible solutions.

- If none of the suggested solutions in this chapter solve your problem, contact Epson as described under “Where To Get Help” on page 13.
Checking Error Messages and Lights

The control panel includes various lights and an LCD display to indicate the status of the printer:

When your paper runs out, ink is low, or a problem occurs, a message appears on the LCD display, and the lights on the control panel come on or flash. The following table lists the messages in alphabetical order and includes an explanation and instructions for correcting the problem.

Improving Print Quality

You can often improve print quality by doing the following:

- Run a nozzle check and cleaning cycle. See page 152 for instructions.
- Align the print head. See page 156 for instructions.
- When you send a print job, make sure your print options are set correctly. For more information, see page 85 (Windows) or page 111 (Macintosh).
If none of these suggestions help, try the solutions in the following table.

| Your print has horizontal banding. |  ▶ Check the ink indicators and light to see if you are low on ink. (If you replace ink cartridges with the printer turned off, the ink indicators will not be accurate.) Replace ink cartridges if necessary, as described on page 157.  
  ▶ Run a nozzle check and cleaning cycle. See page 152 for instructions.  
  ▶ Turn off the **High Speed** setting. See page 108 for instructions.  
  ▶ Make sure the **Media Type** setting in the printer software is correct.  
  ▶ If you’re using cut sheet media, make sure the printable side is face up.  
  ▶ Choose a higher resolution.  
  ▶ If you’re using a third-party RIP and non-Epson media, see if the RIP provides a method for adjusting the paper feed.  
  Try adjusting your advanced media control settings (page 119 for Mac OS X 10.6 & 10.5 or paper configuration settings (page 100 for Windows or page 133 for Mac OS X 10.4.11). Check these settings:  
  ▶ Make sure the **Paper Thickness** setting is correct for your paper.  
  ▶ Use the **Paper Feed Adjustment** to tune out banding. Reduce the value for white lines, and increase it for overlapping dark lines.  
  ▶ If you’ve created a custom paper configuration, be sure to return the setting to standard (**STD**) when you’re done using it. See page 82.  |
| Your print has vertical banding. |  ▶ Turn off the **High Speed** setting. See page 108 for instructions.  
  ▶ Align the print head; see page 156.  |

| Your print has gaps or appears faint. | ◗ Check the expiration date printed on each of the ink cartridges. If the cartridge is too old, replace it as described on page 157.  
 ◗ Make sure the Media Type setting in the printer software is correct.  
 ◗ Run a nozzle check and cleaning cycle (see page 152).  
 ◗ Check the ink indicators and light and replace ink cartridges if your ink supply is low, as described on page 157. (If you replace ink cartridges with the printer turned off, the ink indicators will not be accurate.)  
 ◗ The paper thickness setting is not correct for your paper. Use your printer software (page 119 for Mac OS X 10.6 & 10.5 or page 133 for Mac OS X 10.4.11 or page 101 for Windows) to choose the correct setting. When you’re done printing with a custom paper configuration, be sure to return the setting to standard (STD).  
 ◗ The PLATEN GAP setting is too wide. Use the menu system to change the setting to STANDARD, or to NARROW if printing on very thin paper. See page 76 for instructions. |
| Your print appears blurry or smeared. | ◗ Make sure the Media Type setting in the printer software is correct.  
 ◗ If you’re printing on non-Epson media, you may need to adjust the paper thickness setting, drying time, or color density. Use your printer software (page 119 for Mac OS X 10.6 & 10.5 or page 133 for Mac OS X 10.4.11 or page 101 for Windows) to choose the correct setting. When you’re done printing with a custom paper configuration, be sure to return the setting to standard (STD).  
 ◗ Your paper doesn’t meet the required specifications or wasn’t stored in a dry, humidity-free environment. Load new paper.  
 ◗ If you’re using cut sheet media, make sure the printable side is face-up.  
 ◗ Ink has leaked into the paper path. Wipe the paper path area of the printer with a soft, clean cloth. See page 168 for cleaning instructions.  
 ◗ Turn off the High Speed setting. See page 108 for instructions.  
 ◗ The PLATEN GAP setting is too narrow. Use the control panel to change the setting to WIDE or WIDER. See page 76 for instructions.  
 ◗ Run a nozzle check and cleaning cycle (see page 152).  
 ◗ You may need to uninstall and reinstall the printer driver (see page 193).  
 ◗ If ink is smeared on the back of your print, make sure PAPER SIZE CHECK is ON in the control panel menu. This prevents printing beyond the edge of the paper and soiling the inside of the printer. |
If you can’t turn the printer on, if it stops printing unexpectedly, or if nothing prints, check the following:

- Paper is loaded correctly.
- The printer is plugged securely into a working electrical outlet that’s not controlled by a switch or timer.
- The interface cable is securely connected to the printer and your system.
- The voltage supplied by the electrical outlet matches the voltage on the printer’s rating label. If not, turn off the power and unplug the power cord immediately. Contact your service provider for assistance; see page 13 for details.

If none of these suggestions help, try the solutions below.

Solving Paper Problems

If paper feed or paper jam problems occur frequently, try one or more of the following solutions:

- For roll paper, try adjusting the Paper Suction setting. See page 82 for more information. You can also adjust this setting through your printer driver.
- For heavy or thick media, follow the instructions on page 75 to load the media correctly.
- Make sure the paper is not folded, wrinkled, or damp.
- Make sure the printer’s environment falls within the required temperature and humidity range.
- Make sure the paper is not too thick or too thin. See page 57, page 196, and page 198 for paper specifications.
- Make sure no foreign objects are inside the paper path.
- Make sure the printer isn’t located in a brightly lit area. The paper sensors may not operate correctly.
- Make sure the Media Type and Source settings in the printer software are correct.
- Make sure the PLATEN GAP setting is correct for the paper or media you’re printing on. See page 76 for more information.
- If you’re not using Epson media, use a paper configuration to adjust for the paper’s thickness and drying time; see page 82.
Fixing Paper Eject Problems

If the paper is curled too tightly to eject properly, make sure the paper guides are attached to the printer. There are two paper guides for the Epson Stylus Pro 7700 and five for the Pro 9700.

Attach the guides to the bottom of the printer as shown:

Do one of the following:

- If you are feeding paper in front of the printer, move the guides to the forward position.
- If you are feeding paper backward (under the printer), gently squeeze the paper guides and push them to the backward position, as shown below:

**Note:** If banding appears on your print, leave the paper guides in the forward position.
Clearing Paper Jams

When roll paper gets jammed in the printer, printing stops and you see a PAPER JAM message on the LCD display. Follow these steps to clear a paper jam:

1. Cut the paper at the paper insertion slot.

2. Press the button to release the paper.

3. Rewind the paper.
4. Open the front cover if necessary.

5. Carefully pull down the jammed paper.

**Caution:** To avoid damaging the printer, do not touch the cables around the print head or the roller, ink absorption pad, or ink tubes.

6. Close the front cover, if necessary. Press the power button to turn the printer off and then back on.
Solving Problems With the Optional Auto Take-Up Reel

If you have problems using the optional Auto Take-Up Reel, try these solutions:

- Make sure the AC power cord is plugged into the Auto Take-Up Reel.
- Make sure you turned the printer off and then on again after installing the Auto Take-Up Reel, and that the cable is securely connected to both the printer and Auto Take-Up Reel.
- Make sure there is enough slack in the roll paper as it feeds paper to ensure that it interrupts the sensor so the Auto Take-Up Reel can turn. See page 204 for details.
- Make sure the Auto switch is set for the direction in which you loaded the paper to be taken up. See page 207 for details.
- Make sure you pressed the printer’s Paper Source button to select (Auto Cut Off).
- If the Sensor light flashes slowly when you are not printing, the sensor may be misaligned or there may be an obstacle in the sensor’s beam. Make sure nothing is impeding the sensor’s beam.
- If the Sensor light is off, the Auto Take-Up Reel may be turned off or the sensor cables may be disconnected. See the installation instructions included with the Auto Take-Up Reel.

Uninstalling and Reinstalling the Printer Driver

If you need to uninstall and then reinstall the printer driver software for any reason, follow the instructions in the appropriate section below.

Macintosh OS X 10.6 and 10.5

1. Select System Preferences, then select Print & Fax.
2. Select your printer, then click the – button.
3. If you want to reinstall your printer software, restart your Macintosh. Then follow the instructions on page 51 to install the software.

Tip: Check the Epson Pro Imaging website at www.proimaging.epson.com for updated drivers and utilities that may become available.
Macintosh OS X 10.4

1. Open the Applications folder, then the Utilities folder.

2. Double-click Printer Setup Utility, select your printer, and then click Delete.

3. If you want to reinstall your printer software, restart your Macintosh. Then follow the instructions on page 51 to install the software.

Windows

1. Do one of the following:
   
   **Windows 7 & Windows Vista**: Click 📀 > Control Panel > Uninstall a program. Select EPSON Printer Software in the program list.
   
   **Windows XP**: Click Start > Control Panel > Add or Remove Programs. Select EPSON Printer Software in the program list and click Change/Remove.

2. Select your printer icon and click OK. Follow the on-screen instructions to uninstall your software.

3. If you want to reinstall your printer software, restart your computer. Then follow the instructions on page 49 to install the software.

**Note:** Borderless printing on these papers is recommended on the right and left sides only.
Printable Area

Default roll paper margins are 0.59 inch (15 mm) top and bottom, and 0.12 inch (3 mm) right and left. Using the menu system, you can set all the margins to 15 mm or 3 mm, or set the top margin to 35 mm. See page 217 for details.

The borderless printing feature allows edge-to-edge printing on some media.

</tr>
</tbody>
</table>

Note: We recommend that you use genuine Epson cartridges and do not refill them. The use of other products may affect your print quality and could result in printer damage.

Yields vary considerably based on images printed, print settings, paper type, frequency of use, and temperature. For print quality, a small amount of ink remains in the cartridge after the “replace cartridge” indicator comes on. The printer ships with full cartridges and part of the ink from this first set of cartridges is used for priming the printer.

For best printing results, use up a cartridge within six months of opening the package.
Appendix B: Using the Optional Auto Take-Up Reel

If you want to print multiple images on roll paper and have the printouts rolled up automatically, you can use the optional Auto Take-Up Reel (Epson Stylus Pro 9700 only).

To install the Auto Take-Up Reel, follow the instructions in the manual that came with it.

You can wind your printed media either forward (with the printed surface outside), or backward (with the printed surface inside).

**Note:** Epson Doubleweight or Singleweight Matte paper should be wound forward.

The table below describes the status of the Auto Take-Up Reel as indicated by the Sensor light.

</tr>
<tr>

</tr>
</tbody>
</table>

**Note:**
Loading Roll Paper Onto the Take-Up Reel

Before you load roll paper onto the take-up reel core, check the following:

- Turn off the Auto Take-Up Reel to avoid injury.
- Make sure that the leading edge of the roll paper is straight.

1. Plug in the power cord.

2. Make sure the printer is on and the Auto Take-Up Reel icon appears on the LCD panel.

3. Make sure that the roll paper is loaded in the printer properly. For instructions, see page 59.

4. Press the button to select (Auto Cut Off).

5. Press the button to feed the roll paper out of the printer.

Continue with the steps in the next section if you want to wind your prints forward, or page 206 if you want to wind your prints backward.
Winding Prints Forward

1. Tape the leading edge of the paper to the take-up reel core in three places.

2. Press the ▼ button to feed the paper forward and create some slack.

3. Set the Manual switch on the Auto Take-Up Reel to Forward and hold it long enough to take up at least three turns of paper onto the reel. Make sure adequate slack remains between the roll paper and the take-up reel.

Note: When printing on Singleweight Matte Paper at least 24 inches wide, place the tensioner in the slack area to ensure good print quality.
Winding Prints Backward

1. Wind the bottom of the roll paper around the back of the reel as shown below, then tape the leading edge of the paper to the reel in three places.

2. Press the ▼ button to feed the paper forward and create some slack.

3. Set the Manual switch on the Auto Take-Up Reel to Backward to take up at least three turns of paper onto the reel. Make sure adequate slack remains between the roll paper and the take-up reel.
Printing Using the Auto Take-Up Reel

Once the Auto Take-Up Reel is installed and paper is attached to it, you can use it to take up your prints.

1. Set the Auto switch to Forward or Backward, depending on how you set up the paper.

   ![Auto switch diagram]

2. Send a print job to the printer. When the media blocks the sensor, the Auto Take-Up Reel takes up the roll paper 1/4 to 1/2 turn at a time.

3. When you are ready to remove your prints, set the Auto switch to Off.

   ![Auto switch diagram]

4. Press the button to cut the paper.

**WARNING:** Do not touch the Auto Take-Up Reel while it is operating; doing so may result in injury. Turn off the Auto Take-Up Reel before removing the reel; if the reel operates unexpectedly, bodily injury may occur.
5. To remove your prints, turn the lever to unlock the reel, and then slide it left. Support the reel with one hand to keep it from falling.

6. Remove the take-up reel core from the paper stop on both ends of the reel.

Reversing the Paper Stops for a 2-inch Paper Reel Core

You can use a 2-inch roll paper core (after the paper is used up) in the auto take-up reel. First you need to reverse the paper stops.

1. Remove the paper stop from the drive unit by pinching the clips.
2. Reverse the paper stop so that the smaller knob is on the outside. Then pinch the clip and reinstall the paper stop on the drive unit.

3. Remove the paper stop from the movable unit by pinching the knob.
4. Reverse the paper stop so that the smaller knob is on the outside. Then pinch the knob and reinstall the paper stop on the movable unit.

Install the Take-Up Reel Core

1. Make sure the lock lever is released. Then slide the movable paper stop all the way to the left.
2. Slip one end of the take-up reel core over the paper stop on the drive unit.

3. Insert the paper stop on the movable unit into the other end of the core.
4. Turn the lever to the front to lock the movable unit.
